QUESTION 1

In a highly available CA Process Automation deployment, what is the main role of the Apache software load balancer?

- A. To prevent unauthorized access to the CA Process Automation UI and Web services
- B. To dynamically direct incoming UI and Web Services requests to another CA Process Automation orchestrator
- C. To dynamically direct incoming UI and Web Services requests to nodes in a CA Process Automation orchestrator cluster
- D. To set up and limit the total number of incoming UI and Web Services requests to a CA Process Automation orchestrator cluster

Correct Answer: C

QUESTION 2

You need to integrate CA Process Automation with an external application. A data value or status change in the application will result in a CA Process Automation process starting, continuing, or stopping. Which approach enables you to minimize any potential impact on performance?

- A. Send an email into a mailbox monitored by a CA Process Automation mail trigger.
- B. Continuously poll the external application from the CA Process Automation process to ascertain if data values or statuses in its database change.
- C. Continuously check for a predefined file that the external application will be configured to create in a commonly accessible file system when data values or statuses change.
- D. Send an event to CA Process Automation from the external application when data values or statuses change with a data payload, which will start, continue, or stop the execution of a designated CA Process Automation process.

Correct Answer: D

QUESTION 3

Which default CA Process Automation groups have full access to the Designer tab? (Choose two)

- A. PAMUsers
- B. Designers
- C. PAMAdmins
- D. Production Users

Correct Answer: BC

QUESTION 4

Avoid using named datasets to store:

- A. Credentials for use as login information for a system management tool.
- B. Configuration information that will be used in several different processes.
- C. Information for one-time use, such as Simple Object Access Protocol (SOAP) session IDs.
- D. Error messages that will be printed out and used by only a small subset of processes in the library.

Correct Answer: C

QUESTION 5

The number of loop iterations that a loop operator will run is determined by:

- A. A Loop Exit expression.
- B. A Repeat Count expression.
- C. A CurrentLoopIteration variable.
- D. An OverallLoopDuration variable.

Correct Answer: B
