QUESTION 1

When you import a process object, CA Process Automation:

A. Reverts to the last baseline of the imported object.

B. Enables you to select import options on the Configuration tab.

C. Creates a version of the object that enables you to select and edit any past versions of the process.

D. Creates a version of the object in the library that incorporates any changes you made to the process instance before the export.

Correct Answer: D

QUESTION 2

Sue White is responsible for approving notebook upgrades. Sue is notified by email that she needs to approve an upgrade request. When Sue logs into CA Process Automation and right clicks the task, which menu options are available? (Choose two)

A. Take

B. Reply

C. Escalate

D. Approve

Correct Answer: AB

QUESTION 3

The CA Process Automation UI enables you to perform operations such as configuring domains, environments, orchestrators, agents, touchpoints, proxy touchpoints, and host groups. You can perform all these operations from the:
A. Configuration tab

B. Operations tab

C. Designer tab

D. Library tab

Correct Answer: A

QUESTION 4

You need to integrate CA Process Automation with an external application. A data value or status change in the application will result in a CA Process Automation process starting, continuing, or stopping. Which approach enables

you to minimize any potential impact on performance?

A. Send an email into a mailbox monitored by a CA Process Automation mail trigger.

B. Continuously poll the external application from the CA Process Automation process to ascertain if data values or statuses in its database change.

C. Continuously check for a predefined file that the external application will be configured to create in a commonly accessible file system when data values or statuses change.

D. Send an event to CA Process Automation from the external application when data values or statuses change with a data payload, which will start, continue, or stop the execution of a designated CA Process Automation process.

Correct Answer: D

QUESTION 5

When you test a new process in CA Process Automation, you discover that an error is causing one of the operators to fail. To determine the cause of the failure, the most effective strategy is to first examine the:

A. c2o Jog file

B. global data set

C. process dataset

D. operator dataset

Correct Answer: D
