QUESTION 1

Which of the following actions should be performed on a cube prior to accumulating data in it?

- A. Verify it has been saved.
- B. Delete the cube.
- C. Verify the data exists.
- D. Delete data from the cube.

Correct Answer: D

QUESTION 2

Why would an application developer use multiple time dimensions in a cube?

- A. Users need to forecast sales for the next quarter.
- B. Users need to estimate future inventory needs for the year.
- C. Users need to anticipate units sold of a new product line.
- D. Users need to create financial statements for last year.

Correct Answer: D

QUESTION 3

An application developer would like to modify a TI process created to build a dimension using an ODBC data source. Logical statements must be added to the Metadata script.

What must be done to this process before modifying the scripts?

- A. Copy the statements inside the generated statement area.
- B. Copy the statements below the generated statement area.
- C. Copy the statements to the Data tab.
- D. Copy the statements to the Prolog tab.

Correct Answer: B

QUESTION 4

When should an application developer turn on Enable Cube Logging in a Turbo Integrator process?

- A. When a cube is created.
- B. When changes are made to a cube.
- C. When changes are made to a script.
- D. When a script is created.

Correct Answer: B

QUESTION 5

Some users would like to display an account using the account name followed by the account number. Other users would like to display only the account name.

Which option should the application developer use to satisfy both requirements?

- A. Create a text attribute for each requirement.
- B. Define an alias for each requirement.
- C. Define two alternate hierarchies.
- D. Create two dimensions that link to each other.

Correct Answer: B
