QUESTION 1

What are advantages of message packaging in the BPE? (Choose two)

- A. Improved fault tolerance
- B. Improved alert handling
- C. Improved message throughput
- D. Improved performance

Correct Answer: CD

QUESTION 2

You have created a message mapping using drag and drop from the source to the target element. When testing the mapping by entering a single value for the source element, you notice that the target element has been created with 3 occurrences. Each target element occurrence is filled with the same value as the source element.

What could be the reason for this behavior?

- A. The data type for the source element has the occurrence property maxOccurs=3.
- B. The data type for the source element has the occurrence property minOccurs=3.
- C. The data type for the target element has the occurrence property maxOccurs=3.
- D. The data type for the target element has the occurrence property minOccurs=3.

Correct Answer: D

QUESTION 3

Which relationship do you define in both sender agreement and receiver agreement?

- A. Relationship between operation mapping and communication channel
- B. Relationship between service interface and communication channel
- C. Relationship between sender and receiver communication components
- D. Relationship between service interface and sender/receiver communication components

Correct Answer: B

QUESTION 4

Which tasks do you have to perform to enable service consumption in a consumer application? (Choose two)

- A. Configure a business object in the consumer application.
- B. Create a usage profile for service consumption.
- C. Generate and configure a consumer proxy.
- D. Implement the service call within the consumer application.

Correct Answer: CD

QUESTION 5

What is the purpose of the standard SplitByValue function?

- A. To split the payload
- B. To replicate a value of a field that occurs once
- C. To insert context changes into a queue
- D. To split a string into substrings

Correct Answer: C
