QUESTION 1

You are provided four different datasets. Initial analysis on these datasets show that they have identical mean, variance and correlation values. What should your next step in the analysis be?

- A. Visualize the data to further explore the characteristics of each data set
- B. Select one of the four datasets and begin planning and building a model
- C. Combine the data from all four of the datasets and begin planning and building a model
- D. Recalculate the descriptive statistics since they are unlikely to be identical for each dataset

Correct Answer: A

QUESTION 2

Refer to the exhibit.

Table A: Term inverse document frequencies

	Solid	State	Disk
IDF	2	1.5	0.5

Table B: Term per-document frequencies

Document	Tf		
	Solid	State	Disk
A	0.1	0.1	0.1
B	0.1	0.1	0.5
C	0.2	0.2	0.1
D	0.1	0.3	0.1

Click on the calculator icon in the upper left corner. An analyst is searching a corpus of documents for the topic "solid state disk". In the Exhibit, Table A provides the inverse document frequency for each term across the corpus. Table B provides each term's frequency in four documents selected from corpus. Which of the four documents is most relevant

to the analyst's search?

- A. Document C
- B. Document A
- C. Document B
- D. Document D

Correct Answer: A

QUESTION 3

In addition to less data movement and the ability to use larger datasets in calculations, what is a benefit of analytical calculations in a database?

- A. quicker time to insight
- B. more efficient handling of categorical values
- C. improved connections between disparate data sources
- D. full use of data aggregation functionality

Correct Answer: A

QUESTION 4

What is a property of window functions in SQL commands?

- A. Used to calculate moving averages over various intervals
- B. Group rows into a single output row
- C. Used between the keywords FROM and WHERE in a SELECT command
- D. Ordering data within a window is not required

Correct Answer: A

QUESTION 5

How are window functions different from regular aggregate functions?

- A. Rows retain their separate identities and the window function can access more than the current row.
- B. Rows are grouped into an output row and the window function can access more than the current row.
- C. Rows retain their separate identities and the window function can only access the current row.

D. Rows are grouped into an output row and the window function can only access the current row.

Correct Answer: A
