- ⚙️ **800,000+** Satisfied Customers

**QUESTION 1**

You need to modify an application environment to support more clients and increased data throughput. What is a valid method?

- A. Vertically scale by increasing resources on existing nodes
- B. Migrate the application from SSD to SAS storage
- C. Migrate the application from SAS to NL SAS storage
- D. Horizontally scale using a closed loop system

Correct Answer: A

---

**QUESTION 2**

A company relies upon an application that processes test results from a manufacturing facility, then generates and archives quality reports. The code was developed by the company's IT department 10 years ago, and it runs on an old, but still supported UNIX system. Although it has not been changed in over five years, the application source code and skills needed to modify it are still available internally.

What best describes this?

- A. A legacy application
- B. Vendor lock-in
- C. An enterprise application
- D. Service-oriented architecture

Correct Answer: A

---

**QUESTION 3**

The CIO has asked you to review the status of your company's VDC and validate that the implementation has entered the IT-as-a-Service phase.

Which capability must be in place prior to transitioning to this phase?

- A. Zero-touch infrastructure
- B. Policy-driven automation
- C. Self-service
- D. Chargeback

Correct Answer: A

---

**QUESTION 4**

When should you consider implementing hypervisor over-provisioning?

- A. Tier-2 and Tier-3 applications are configured in separate hypervisor clusters.
- B. Performance is a primary and critical consideration.
- C. Multiple applications have the same peak workload times.
- D. A mix of Tier-1 and Tier-2 applications are in the same hypervisor cluster.

Correct Answer: A

---

**QUESTION 5**

As part of a VDC design, you configured a number of virtual machine OS clusters. Each cluster must have a non-routable network to accommodate system heartbeats. However, some of the clusters house sensitive data that should not be accessible by any other cluster. For fault tolerance purposes, the cluster nodes will never be hosted on the same hypervisor.

How should you instruct the administrator to configure the Private VLANs?

- A. Configure the Primary and Community VLANs on both the hypervisor virtual switches and access layer switches.
- B. Configure the Primary and Community VLANs on the hypervisor virtual switches.
- C. Configure the Primary and Isolated VLANs on both the hypervisor virtual switches and access layer switches.
- D. Configure the Primary and Isolated VLANs on the hypervisor virtual switches.

Correct Answer: A
