QUESTION 5

You have targeted a subnet of lab computers that all need to be reimaged. You create a Migration task

that will reimage the machines using Targeted MulticastTM and start the task. The job fails, stating that a

Multicast Domain Representative could not be found.

What is the most likely cause of the error?

A. There is not a PXE Proxy on the targeted subnet.

B. A preferred Multicast Domain Representative has not been selected for the targeted subnet.

C. There is not a managed node with the Targeted Multicast client that will persist on the subnet.

D. The routers between the Core Server and the targeted subnet have not been configured to pass multicast packets.

Correct Answer: C
