QUESTION 1

In Microsoft Dynamics AX 2012, which of the following statements about order by and group by clauses of an X++ select statement is true?

- A. Only the order by clause supports the reverse keyword.
- B. Only the group by clause supports the reverse keyword.
- C. When a group by clause is used to sort records, you must reference an index in a select statement.
- D. When an order by clause is used to sort records, you must not reference an index in a select statement.

Correct Answer: A

QUESTION 2

In Microsoft Dynamics AX 2012, what is the effect of using an exists or notexists join clause between two tables in a select statement?

- A. Only the first table is populated by using the join clause.
- B. Only the second table is populated by using the join clause.
- C. Both tables are populated by using the join clause.
- D. Neither table is populated by using the join clause.

Correct Answer: A

QUESTION 3

In Microsoft Dynamics AX 2012, which of the following statements about full text table indexes are true? (Choose all that apply.)

- A. A full text index can include multiple string fields.
- B. A full text index can be referenced by using an X++ statement.
- C. A full text index stores information about the location of each significant word in a string field of a table.
- D. You can reference a full text index in a query by creating a query range of type Full Text Index.
- E. When a query references a full text index, it returns the first record that contains at least one of the search terms in the indexed fields.

Correct Answer: ACD

QUESTION 4

In Microsoft Dynamics AX 2012, how do you fetch a table record when the noFetch keyword is used in an X++ select statement?

- A. By using a next statement.
- B. By using the firstFast keyword.
- C. By using the firstOnly keyword.
- D. By using the firstOnly10 keyword.

Correct Answer: A

QUESTION 5

In Microsoft Dynamics AX 2012, to which of the following security elements can you assign privileges? (Choose all that apply.)
