QUESTION 1

P8 follows industry practices in separating authentication (validating the identity of users) from authorization (controlling access to resources for identified users).

Which of the following is TRUE for P8's handling of authentication and authorization?

- A. Authentication is handled by the application server. Authorization is handled by P8.
- B. Authorization is handled by the application server. Authentication is handled by P8.
- C. P8 can handle authentication if the Password Synchronization feature is enabled.
- D. The Old Dogs New Tricks (ODNT) policy mechanism can be used to supplement the internal P8 authorization calculations.

Correct Answer: A

QUESTION 2

Which is NOT a characteristic of a workflow definition?

- A. It is a graphical map showing the sequences of steps needed to complete the business process.
- B. Contains roles to specify which users can access specific types of work flows.
- C. It is a specification of each step, including who will process the work for the step, which step processor application the participant will use, which attachments are required, what data is necessary, what responses the participant can choose, and other options.
- D. Contains routing logic that specifies how work advances from one step to the next.

Correct Answer: B

QUESTION 3

Who can add custom classes or properties to a P8 repository?

- A. Accredited IBM business partners.
- B. Customer IT personnel.
- C. All of the above.
- D. IBM Software Services.

Correct Answer: C

QUESTION 4

The CE has discoverable, self-describing meta data. Which of the following things can NOT be discovered through CE meta data?

- A. The path to individual content elements stored in a file system.
- B. The names of database tables and columns where custom property values are stored.
- C. The hierarchy of document classes and the point in the hierarchy at which custom properties are added to classes.
- D. Information about referential integrity checks that will be performed by the CE server when creating, updating, or deleting objects.

Correct Answer: A

QUESTION 5

While implementing a FileNet P8 solution, you would like to make content addition to the FileNet ECM repository easy, intuitive and productive to end users. The proposed solution should address requirements such as allow documents of a specific type to be added to a given folder, hide certain properties from the user when entering metadata for the document, and apply pre-configured security to documents. Which of the following techniques best addresses these requirements?

- A. Use a Form Policy Document.
- B. Use the default Add Document functionality provided in the IBM Content Navigator.
- C. Use a Search Template.
- D. Use a Document Entry Template.

Correct Answer: D
