QUESTION 1

A customer has a SASbased storage environment with a SAS domain and some standalone servers, each with multiple builtin SAS disks. The implementation includes direct routing, table routing and subtractive routing. What is table routing?

- A. routing along multiple parallel connections
- B. routing along a physical pointtopoint connection
- C. routing between devices connected to an edge expander
- D. routing between devices connected to different edge expanders

Correct Answer: C

QUESTION 2

A customer's database environment includes remote synchronous mirroring across a DWDM link. Which two (2) business management requirements will be met by the implementation? (Choose two.)

- A. cost
- B. service
- C. continuity
- D. availability
- E. configuration

Correct Answer: CD

QUESTION 3

The storage administrator has a request to add more storage to support added features on an application. Which two (2) steps must be taken for the application to recognize the added storage? (Choose two.)

- A. rescan the SCSI bus
- B. enable array rescanning
- C. configure LUN masking
- D. zone the host to the subsystem port
- E. increase the HBA time out value

Correct Answer: AC

QUESTION 4

What is a concern when removing media from service?

- A. data on media should be erased
- B. data on media should be archived
- C. tapes should be archived
- D. management information should be sanitized

Correct Answer: A

QUESTION 5

You have been asked to review your fabric management plan for effectiveness and efficiency, and to ensure that you are meeting its stated requirement. What should you check to see if you are meeting the defined SLAs?

- A. viability of 1Gb/s FC technology to minimize problems with support
- B. backup and recovery test results and their impact on fabric infrastructure
- C. actual expenditure on fabric services against the predicted expenditure
- D. frequency of fabric failures and the number of services impacted

Correct Answer: A
