QUESTION 1

Using the Setup menu, the Universal Containers company activated data sync (replication) in the Einstein Analytics settings. After running the sync, they notice that the aggregate sum of a field within their dataset is different than what they manually calculated by summing the same data in the Salesforce object from which the dataset was populated.

Which two differences in the newly synced data can explain this? Choose 2 answers

A. Differences involving permanently deleted records

B. Differences involving workflow-updated fields

C. Differences involving formula fields

D. Differences involving trigger-updated fields

Correct Answer: AC
