QUESTION 1

You have an Azure Active Directory (Azure AD) tenant named contoso.com that is synced to an Active Directory domain. The tenant contains the users shown in the following table.

| Name | Type | Source |
|-------|--------|---------------------------------|
| User1 | Member | Azure AD |
| User2 | Member | Windows Server Active Directory |
| User3 | Guest | Microsoft account |
| User4 | Member | Windows Server Active Directory |

The users have the attribute shown in the following table.

| Name | Office phone | Mobile phone |
|-------|--------------|--------------|
| User1 | 222-555-1234 | 222-555-2345 |
| User2 | null | null |
| User3 | 222-555-1234 | 222-555-2346 |
| User4 | 222-555-1234 | null |

You need to ensure that you can enable Azure Multi-Factor Authentication (MFA) for all four users. Solution: You add a mobile phone number for User2 and User4. Does this meet the Goal?

- A. Yes
- B. No

Correct Answer: B

User3 requires a user account in Azure AD.

Note: Your Azure AD password is considered an authentication method. It is the one method that cannot be disabled.

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-authentication-methods>

QUESTION 2

HOTSPOT

You have Azure Storage accounts as shown in the following exhibit.

Home > Storage accounts

Storage accounts

+ Add Edit columns Refresh Assign Tags Delete

Subscription: All 2 selected - Don't see a subscription? Switch directories

Filter by home... All subscriptions All resource groups All types All locations No grouping

3 items

| NAME | TYPE | RESOURCE... | LOCATION | SUBSCRIPTION | ACCESS T... | REPLICAT... |
|-----------------|-----------------|------------------------|------------|----------------|-------------|----------------------|
| storageaccount1 | Storage account | Storage ContosoRG1 | East US | Subscription 1 | - | Read-access ge... |
| storageaccount2 | Storage account | StorageV2 ContosoRG1 | Central US | Subscription 1 | Hot | Geo-redundant... |
| storageaccount3 | Storage account | BlobStorage ContosoRG1 | East US | Subscription 1 | Hot | Locally-redundant... |

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

You can use [answer choice] for Azure Table Storage.

- storageaccount1 only
- storageaccount2 only
- storageaccount3 only
- storageaccount1 and storageaccount2 only
- storageaccount2 and storageaccount3 only

You can use [answer choice] for Azure Blob storage.

- storageaccount3 only
- storageaccount2 and storageaccount3 only
- storageaccount1 and storageaccount3 only
- all the storage accounts

Correct Answer:

Answer Area

You can use [answer choice] for Azure Table Storage.

| |
|--|
| storageaccount1 only |
| storageaccount2 only |
| storageaccount3 only |
| storageaccount1 and storageaccount2 only |
| storageaccount2 and storageaccount3 only |

You can use [answer choice] for Azure Blob storage.

| |
|--|
| storageaccount3 only |
| storageaccount2 and storageaccount3 only |
| storageaccount1 and storageaccount3 only |
| all the storage accounts |

Box 1: storageaccount1 and storageaccount2 only Box 2: All the storage accounts Note: The three different storage account options are: General-purpose v2 (GPv2) accounts, General-purpose v1 (GPv1) accounts, and Blob storage accounts.

1.

General-purpose v2 (GPv2) accounts are storage accounts that support all of the latest features for blobs, files, queues, and tables.

2.

Blob storage accounts support all the same block blob features as GPv2, but are limited to supporting only block blobs.

3.

General-purpose v1 (GPv1) accounts provide access to all Azure Storage services, but may not have the latest features or the lowest per gigabyte pricing.

Reference: <https://docs.microsoft.com/en-us/azure/storage/common/storage-account-options>

QUESTION 3

You have an Azure subscription that contains an Azure Directory (Azure AD) tenant named contoso.com. The tenant is synced to the on-premises Active Directory domain. The domain contains the users shown in the following table.

| Name | Role |
|------------|------------------------|
| SecAdmin1 | Security administrator |
| BillAdmin1 | Billing administrator |
| User1 | Reports reader |

You enable self-service password reset (SSPR) for all users and configure SSPR to have the following authentication

methods:

*

Number of methods required to reset: 2

*

Methods available to users: Mobile phone, Security questions

*

Number of questions required to register: 3

*

Number of questions required to reset: 3

You select the following security questions:

*

What is your favorite food?

*

In what city was your first job?

*

What was the name of your first pet?

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

| Statements | Yes | No |
|--|-----------------------|-----------------------|
| SecAdmin1 must answer the following question if he wants to reset his password: In what city was your first job? | <input type="radio"/> | <input type="radio"/> |
| BillAdmin1 must answer the following question if he wants to reset his password: What is your favorite food? | <input type="radio"/> | <input type="radio"/> |
| User1 must answer the following question if he wants to reset his password: What was the name of your first pet? | <input type="radio"/> | <input type="radio"/> |

Correct Answer:

| Statements | Yes | No |
|--|----------------------------------|----------------------------------|
| SecAdmin1 must answer the following question if he wants to reset his password: In what city was your first job? | <input type="radio"/> | <input checked="" type="radio"/> |
| BillAdmin1 must answer the following question if he wants to reset his password: What is your favorite food? | <input checked="" type="radio"/> | <input type="radio"/> |
| User1 must answer the following question if he wants to reset his password: What was the name of your first pet? | <input checked="" type="radio"/> | <input type="radio"/> |

Box 1: No Administrator accounts are special accounts with elevated permissions. To secure them, the following restrictions apply to changing passwords of administrators: On-premises enterprise administrators or domain administrators cannot reset their password through Self-service password reset (SSPR). They can only change their password in their on-premises environment. Thus, we recommend not syncing on-prem AD admin accounts to Azure AD. An administrator cannot use secret Questions and Answers as a method to reset password. Box 2: Yes Self-service password reset (SSPR) is an Azure Active Directory feature that enables employees to reset their passwords without needing to contact IT staff. Box 3: Yes References: <https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-sspr-deployment>

QUESTION 4

You have a public load balancer that balances ports 80 and 443 across three virtual machines. You need to direct all the Remote Desktop Protocol (RDP) connections to VM3 only. What should you configure?

- A. a load balancing rule
- B. a new public load balancer for VM3
- C. an inbound NAT rule
- D. a frontend IP configuration

Correct Answer: C

To port forward traffic to a specific port on specific VMs use an inbound network address translation (NAT) rule.

<https://docs.microsoft.com/en-us/azure/load-balancer/load-balancer-overview> an inbound NAT rule :

Create a load balancer inbound network address translation (NAT) rule to forward traffic from a specific port of the front-end IP address to a specific port of a back-end VM.

Hence this option is Correct

a load balancing rule : Incorrect Choice

A load balancer rule defines how traffic is distributed to the VMs. The rule defines the front-end IP configuration for incoming traffic, the back-end IP pool to receive the traffic, and the required source and destination ports.

a new public load balancer for VM3 : Incorrect Choice

This option will not help you since this will route all traffic to VM3 only.

a frontend IP configuration : Incorrect Choice

When you define an Azure Load Balancer, a frontend and a backend pool configuration are connected with rules. The health probe referenced by the rule is used to determine how new flows are sent to a node in the backend pool. The

frontend (aka VIP) is defined by a 3-tuple comprised of an IP address (public or internal), a transport protocol (UDP or TCP), and a port number from the load balancing rule. The backend pool is a collection of Virtual Machine IP

configurations (part of the NIC resource) which reference the Load Balancer backend pool.

References:

<https://docs.microsoft.com/en-us/azure/load-balancer/tutorial-load-balancer-port-forwarding-portal>

<https://pixelrobots.co.uk/2017/08/azure-load-balancer-for-rds/>

QUESTION 5

You have a sync group that has the endpoints shown in the following table.

| Name | Type |
|-----------|-----------------|
| Endpoint1 | Cloud endpoint |
| Endpoint2 | Server endpoint |
| Endpoint3 | Server endpoint |

Cloud tiering is enabled for Endpoint3.

You add a file named File1 to Endpoint1 and a file named File2 to Endpoint2. You need to identify on which endpoints File1 and File2 will be available within 24 hours of adding the files.

What should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

File1:

| | |
|-------------------------------------|---|
| | ▼ |
| Endpoint1only | |
| Endpoint3 only | |
| Endpoint2 and Endpoint3 only | |
| Endpoint1, Endpoint2, and Endpoint3 | |

File2:

| | |
|-------------------------------------|---|
| | ▼ |
| Endpoint1only | |
| Endpoint3 only | |
| Endpoint2 and Endpoint3 only | |
| Endpoint1, Endpoint2, and Endpoint3 | |

Correct Answer:

File1:

| | |
|-------------------------------------|---|
| | ▼ |
| Endpoint1only | |
| Endpoint3 only | |
| Endpoint2 and Endpoint3 only | |
| Endpoint1, Endpoint2, and Endpoint3 | |

File2:

| | |
|-------------------------------------|---|
| | ▼ |
| Endpoint1only | |
| Endpoint3 only | |
| Endpoint2 and Endpoint3 only | |
| Endpoint1, Endpoint2, and Endpoint3 | |

File1: Endpoint3 only Cloud Tiering: A switch to enable or disable cloud tiering. When enabled, cloud tiering will tier files to your Azure file shares. This converts on-premises file shares into a cache, rather than a complete copy of the dataset, to help you manage space efficiency on your server. With cloud tiering, infrequently used or accessed files can be tiered to Azure Files. File2: Endpoint1, Endpoint2, and Endpoint3 References: <https://docs.microsoft.com/en-us/azure/storage/files/storage-sync-cloud-tiering>
