QUESTION 1

HOTSPOT

You have an Azure subscription.

You create the Azure Storage account shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Hot Area:

The minimum number of copies of the storage account will be [answer choice]

1
2
3
4

To reduce the cost of infrequently accessed data in the storage account, you must modify the [answer choice] setting

Access tier (default)
Performance
Account kind
Replication

Correct Answer:

The minimum number of copies of the storage account will be [answer choice]

1
2
3
4

To reduce the cost of infrequently accessed data in the storage account, you must modify the [answer choice] setting

Access tier (default)
Performance
Account kind
Replication

Box1: LRS will keep minimum three copies.

Box2: Changing the access tier from hot to cool will reduce the cost. In performance, standard is cheap.

In the Account kind, GPV2 is giving best price. Can be checked yourself using the pricing calculator on below link.

Reference:

<https://azure.microsoft.com/en-in/pricing/calculator/?service=storage>

QUESTION 2

You have an Azure subscription named Subscription1.

You have 5 TB of data that you need to transfer to Subscription1.

You plan to use an Azure Import/Export job.

What can you use as the destination of the imported data?

- A. Azure SQL Database
- B. Azure File Storage
- C. An Azure Cosmos DB database
- D. The Azure File Sync Storage Sync Service
- E. Azure Data Factory
- F. A virtual machine

Correct Answer: B

Azure Import/Export service is used to securely import large amounts of data to Azure Blob storage and Azure Files by shipping disk drives to an Azure datacenter.

<https://docs.microsoft.com/en-us/azure/storage/common/storage-import-export-service>

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You have a computer named Computer1 that has a point-to-site VPN connection to an Azure virtual network named VNet1. The point-to-site connection uses a self-signed certificate. From Azure, you download and install the VPN client configuration package on a computer named Computer2. You need to ensure that you can establish a point-to-site VPN connection to VNet1 from Computer2.

Solution: You modify the Azure Active Directory (Azure AD) authentication policies. Does this meet this goal?

A. Yes

B. No

Correct Answer: B

Instead export the client certificate from Computer1 and install the certificate on Computer2.

Note:

Each client computer that connects to a VNet using Point-to-Site must have a client certificate installed. You generate a client certificate from the self-signed root certificate, and then export and install the client certificate. If the client certificate

is not installed, authentication fails.

Reference:

<https://docs.microsoft.com/en-us/azure/vpn-gateway/vpn-gateway-certificates-point-to-site>

QUESTION 4

HOTSPOT

You have an Azure subscription named Subscription1 that contains a resource group named RG1.

In RG1, you create an internal load balancer named LB1 and a public load balancer named LB2.

You need to ensure that an administrator named Admin1 can manage LB1 and LB2. The solution must follow the principle of least privilege.

Which role should you assign to Admin1 for each task? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

To add a backend pool to LB1:

	▼
Contributor on LB1	
Network Contributor on LB1	
Network Contributor on RG1	
Owner on LB1	

To add a health probe to LB2:

	▼
Contributor on LB2	
Network Contributor on LB2	
Network Contributor on RG1	
Owner on LB2	

Correct Answer:

Answer Area

To add a backend pool to LB1:

	▼
Contributor on LB1	
Network Contributor on LB1	
Network Contributor on RG1	
Owner on LB1	

To add a health probe to LB2:

	▼
Contributor on LB2	
Network Contributor on LB2	
Network Contributor on RG1	
Owner on LB2	

The Network Contributor role lets you manage networks, but not access them.

Reference: <https://docs.microsoft.com/en-us/azure/role-based-access-control/built-in-roles>

QUESTION 5

You sign up for Azure Active Directory (Azure AD) Premium. You need to add a user named admin1@contoso.com as an administrator on all the computers that will be joined to the Azure AD domain. What should you configure in Azure AD?

- A. Device settings from the Devices blade.
- B. General settings from the Groups blade.
- C. User settings from the Users blade.
- D. Providers from the MFA Server blade.

Correct Answer: A

When you connect a Windows device with Azure AD using an Azure AD join, Azure AD adds the following security principles to the local administrators group on the device: The Azure AD global administrator role The Azure AD device administrator role The user performing the Azure AD join In the Azure portal, you can manage the device administrator role on the Devices page. To open the Devices page:

1.
Sign in to your Azure portal as a global administrator or device administrator.
2.
On the left navbar, click Azure Active Directory.
3.
In the Manage section, click Devices.
4.
On the Devices page, click Device settings.
5.
To modify the device administrator role, configure Additional local administrators on Azure AD joined devices.
