**QUESTION 1**

Note: This question is a part of series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to deploy resources to host a stateless web app in an Azure subscription. The solution must meet the following requirements:

1.

Provide access to the full .NET framework.

2.

Provide redundancy if an Azure region fails.

3.

Grant administrators access to the operating system to install custom application dependencies.

Solution: You deploy a web app in an Isolated App Service plan.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

Instead, you should deploy an Azure virtual machine to two Azure regions, and you create a Traffic Manager profile.

QUESTION 2

You need to recommend a compute solution for the middle tier of the payment processing system. What should you include in the recommendation?

A. Azure Kubernetes Service (AKS)

B. virtual machine scale sets

C. availability sets

D. App Service Environments (ASEs)

Correct Answer: B

QUESTION 3

You are designing a data protection strategy for Azure virtual machines. All the virtual machines are in the Standard tier and use managed disks. You need to recommend a solution that meets the following requirements:

1.

The use of encryption keys is audited.

2.

All the data is encrypted at rest always.

3.

You manage the encryption keys, not Microsoft. What should you include in the recommendation?

A. BitLocker Drive Encryption (BitLocker)

B. Azure Storage Service Encryption

C. client-side encryption

D. Azure Disk Encryption

Correct Answer: D

Reference: <https://docs.microsoft.com/en-us/azure/security/azure-security-disk-encryption-overview>

QUESTION 4

HOTSPOT

A company plans to implement an HTTP-based API to support a web app. The web app allows customers to check the status of their orders.

The API must meet the following requirements:

1.

Implement Azure Functions

2.

Provide public read-only operations

3.

Do not allow write operations

You need to recommend configuration options.

What should you recommend? To answer, configure the appropriate options in the dialog box in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Allowed authentication methods

	▼
All methods	
GET only	
GET and POST only	
GET, POST, and OPTIONS only	

Authorization level

	▼
Function	
Anonymous	
Admin	

Correct Answer:

Allowed authentication methods

▼
All methods
GET only
GET and POST only
GET, POST, and OPTIONS only

Authorization level

▼
Function
Anonymous
Admin

Allowed authentication methods: GET only

Authorization level: Anonymous

The option is Allow Anonymous requests. This option turns on authentication and authorization in App Service, but defers authorization decisions to your application code. For authenticated requests, App Service also passes along authentication information in the HTTP headers.

This option provides more flexibility in handling anonymous requests.

QUESTION 5

Note: This question is a part of series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure subscription that contains a resource group named RG1.

You create an Azure Active Directory (Azure AD) group named ResearchUsers that contains the user accounts of all

researchers.

You need to recommend a solution that meets the following requirements:

1.
The researchers must be allowed to create Azure virtual machines.
2.
The researchers must only be able to create Azure virtual machines by using specific Azure Resource Manager templates.

Solution: Create an Azure DevOps Project. Configure the DevOps Project settings.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

Instead: On RG1, assign the Contributor role to the ResearchUsers group. Create a custom Azure Policy definition and assign the policy to RG1.
