QUESTION 1

The process model below shows a development practice that is inefficient and may cause performance issues in an IBM BPM application when a high volume of process instances are executed at the same time. Which inefficient development practice is modeled below?

A. Not clearing variables in exposed human services

B. Requiring user intervention in each loop iteration

C. Using sequential system lane activities inefficiently

D. Using multi-instance loops in system lane or batch activities

Correct Answer: A

QUESTION 2

Administrators in a hospital use a web-based application when filling out new patient forms. They experience frequent web browser freezes or it becomes unresponsive for several seconds. This is due to large content of data with numerous sections and tables presented in a single page patient form. As part of refactoring the application, the BPM application developer is tasked to mitigate the performance impact of the new patient form page. What guidelines can the developer follow to improve the performance?

A. Add exit safeguard, collapsible panel in deferred section control, and add modal section with panel

B. Add tab section, change the rendering option of one or more table columns to seamless coach view, and add progress bar with navigation event

C. Contain coach views with in responsive sensor, add modal section, and change the rendering option of one or more table columns to simple html

![Pass2Lead](https://Pass2Lead.com)
D. Server side pagination of table data, contain complex coach view in a deferred section control, and enable async loading in horizontal/vertical layouts

Correct Answer: D

QUESTION 3

A customer has a business requirement to completely separate connectivity between production

environments from development and test environments.

How should a developer deploy a new process application to a properly configured production Process

Server?

A. Use \\'BPMConfig\\' to remote deploy

B. Use offline deployment to the Process Server

C. FTP the process .ear file and install using the wasadmin console in production

D. Export the .twx file from the Process Center console and import into the Process Server

Correct Answer: C

QUESTION 4

How can performance data be tracked across processes?

A. Create and configure tracking groups.

B. Enable autotracking on each activity of the process.

C. Put all tracked activities in swimlanes mapped to the same team.

D. Activate all snapshots which contain desired autotracked variables.

Correct Answer: B

QUESTION 5

Which statement is true regarding user interfaces (UI) in IBM BPM?

A. Client-side human service process instance UI can be an instance details UI or a process launch UL

B. Client-side human services are also referred to as heritage human services, whereas the new human services are commonly called coaches or coach views.

C. Client-side human services can contain scripts, other embedded client-side human services, embedded heritage human services, and service calls to other services.

![Pass2Lead](https://Pass2Lead.com)
D. Client-side human services are user interface artifacts that are contained only within and deployed with the processes which use them they use coaches to build the web pages that users see.

Correct Answer: A
