QUESTION 1

By default what log file will be generated in IBM FileNet Content Manager V.5.2.1 when an administrator enables tracing for process clients to troubleshooting a problem were workflows will not manually launch when content is added to the object store?

- A. pe_api_trace.log
- B. p8_server_trace.log
- C. File name configured in the fnlog4j.properties file.
- D. File name configured in the application server administration console.

Correct Answer: B

QUESTION 2

An administrator is setting up a new Fixed Content Device to an Image Services (IS) server for FCS-IS.

During the setup and testing of the configuration, an extract of the error seen is:

SSI FNRCE0000E - ERROR

IS_SSI_8502: SSI_Base: g_logon error: called sec.logon() err=

Based on these messages, what would be the best next step for the administrator to troubleshoot this message?

- A. On the IS server run fn_msg with the error tuple.
- B. Ping the IS server from the FCM server to verify network connectivity.
- C. Check the user name defined in the IS datasource in the WebSphere Application Server.
- D. On the IS server run INX_tool>ce_info and verify that the FCM Domain and Object Store are listed.

Correct Answer: D

QUESTION 3

For a new IBM FileNet Content Engine server installation or upgrade, what additional information must be provided by an administrator and recorded in the installation and upgrade worksheet in addition to the Global Configuration Database name?

- A. Objectstore database names and database port numbers.
- B. Objectstore database names, database accounts and passwords.
- C. Objectstore database names, database port numbers and database accounts.

D. Objectstore database names, database accounts, passwords, datasource names and IP address.

Correct Answer: D

QUESTION 4

A customer would like to implement a highly available environment for IBM FileNet Content Platform Engine (CPE) and IBM Content Navigator (ICN) without using an application server cluster.

How can the customer achieve high availability with this configuration?

- A. A "stovepipe" configuration would be implemented on only the ICN servers. IBM only supports the stovepipe topology for ICN server.
- B. A "stovepipe" configuration would be implemented on only the CPE servers. IBM only supports the stovepipe topology for CPE servers.
- C. A "stovepipe" configuration would be implemented which uses the application servers in such a manner that high availability is achieved at the stovepipe level via a hardware load balancer.
- D. A highly available environment is not possible in this scenario. Only the use of this application server clustering solution such as WebSphere Application Server Network Deployment (WASND) can achieve high availability.

Correct Answer: B

QUESTION 5

Which of the following logs can be checked for errors if the Composite Platform Installation Tool (CPIT) does not complete the installation?

- A. /cpit/cpit_install_stderr.txt and /cpit/cpit_install_stdout.txt
- B. /cpit/cpit_install_stderr.txt, /cpit/cpit_install_stdout.txt, and IBM WebSphere Application Server logs
- C. /cpit/cpit_install_stderr.txt, /cpit/cpit_install_stdout.txt, and IBM WebSphere Application Server and IBM DB2 database logs
- D. /cpit/cpit_install_stderr.txt, /cpit/cpit_install_stdout.txt, and IBM WebSphere Application Server, IBM DB2 database and Microsoft Active Directory logs

Correct Answer: D
