**QUESTION 1**

An administrator wants to start the LifeCycle Manager service. How can this be done?

- A. Open IBM Cognos Configuration and start the service.
- B. Open Administrative tools, Services, and start the LCM service.
- C. Use the lcm_start.bat command from a command prompt window.
- D. Type the URL in a browser, `http://server_name:port_number/lcm_servlet/webcontent/app/main`.

Correct Answer: C

Before users can start working in Cognos LifeCycle Manager, you must start the Cognos LifeCycle Manager web application.

Procedure

Start the Cognos LifeCycle Manager server:

On a Microsoft Windows system, from the Start menu, click LCM Start.

You can also type the following command in a command prompt window, from the Cognos LifeCycle Manager install location. Depending on where Cognos LifeCycle Manager is installed, you might have to run the command prompt window

as an administrator.

`lcm_start.bat`

On a Linux system, run the server start script

`install_location/lcm_start.sh`

Start the Cognos LifeCycle Manager web application:

On a Microsoft Windows system, from the Start menu, click LCM URI.

Type the following URL in your browser:

`http://server_name:port_number/lcm_servlet/app/main`

Incorrect Answers:

D: The URL that is used to start the Cognos LifeCycle Manager web application in a browser includes a port number. The port number must match the port number that is specified in the `install_location\wlp\usr\servers\lcm\server.xml` file.

QUESTION 2

An administrator is attempting to import a backup of the entire Content Store into an existing Content Store. What is an instance of when an object will be kept by the default conflict resolution rule?

- A. There are not any conflict resolution rules applied when importing the entire Content Store. All objects will be replaced.
- B. When the object is OUTPUT, GRAPHIC or PAGE and the CM.DEPLOYMENTKEEPERREPORTOUTPUT parameter is set to True.
- C. When the object is OUTPUT, GRAPHIC or PAGE and the CM.DEPLOYMENTUSERREPORTOUTPUT parameter is set to True.
- D. When the object is CACHEOUTPUT, SESSION or REPORTCACHE, REPORTMETADATACACHE or DEPLOYMENTDETAIL.

Correct Answer: D

The default conflict resolution rule for deploying the entire content store is replace. Exceptions to the default conflict resolution rule are listed in the following table:

Object name: SESSION, CACHEOUTPUT, REPORTCACHE, REPORTMETADATACACHE, DEPLOYMENTDETAIL
Conflict Resolution Rule: Keep

References: https://www.ibm.com/support/knowledgecenter/SSEP7J_10.2.2/com.ibm.swg.ba.cognos.ug_cra.10.2.2.doc/c_ruleswhendeployingtheentirecontentstore.html#RulesWhenDeployingtheEntireContentStore

QUESTION 3

All users have unrestricted access in a secured environment. What must be modified to control this access?

- A. Delete the "All Authenticated Users" group.
- B. Disable anonymous access using IBM Cognos Configuration.
- C. Modify the advanced properties of the authorization namespace.
- D. Remove the "Everyone" group from the "System Administrators" role.

Correct Answer: B

You can disable the Anonymous user account by changing the configuration parameters in the configuration tool.

This entry represents a user account shared by members of the general public who can access IBM Cognos software without being prompted for authentication. For example, this type of access is useful when distributing an online catalog.

Anonymous users can see only those entries for which access permissions are not set, or are set specifically for this account or for the Everyone group.

Incorrect Answers:

A: The built-in entries include the Anonymous user account, the groups All Authenticated Users and Everyone, and the role System Administrators. You cannot delete the built-in entries. They appear in both secured and non-secured environments.

QUESTION 4

An administrator needs to address an environment that is not running optimally and conduct an architecture review.

Which performance attributes should be considered?

- A. capacity, scalability, availability
- B. gateways, application servers, Content Manager
- C. IBM Cognos implementation, capacity, infrastructure
- D. infrastructure, gateways, application servers, scalability

Correct Answer: C

Conduct an architecture review to assess the physical architecture and software installation.

QUESTION 5

An administrator wants to use one of the sample audit reports to view the percentage of successful and failed requests for the current day. What must be done before they can successfully run this report?

- A. Set the logging level for the sample report to Minimal.
- B. Create a datasource connection to the logging database.
- C. Modify the report so that it can be displayed correctly in HTML and PDF formats.
- D. Import the Audit.cpf into the Content Store using the IBM Cognos Administration console.

Correct Answer: B

Before you can create audit reports or use the sample audit reports that come with IBM Cognos software, you must set up audit reporting.

Direct log messages to a database.

Set up a logging database and configure log messages to be sent to the database.

Set the logging level for audit reports.

For audit reporting, set the logging level to Basic (auditing enabled) or Request. If you set the logging level to Minimum, auditing is disabled. Use Full logging and Trace levels only for detailed troubleshooting purposes, under the guidance of

Customer Support. They may significantly degrade server performance.

Enable native query logging

Incorrect Answers:

A: If you set the logging level to Minimum, auditing is disabled.
