### QUESTION 1

In a multi-server environment, an administrator wants to ensure that items in the Content Manager Cache service are re-validated every thirty seconds. Which option would accomplish this?

- A. Set the memory limit of the Content Manager Cache service to 30000.
- B. Set the DISP.contentManagerCacheService.accountInactivityTimer property to 30000.
- C. Set the DISP.contentManagerCacheService.cacheValidatorTimetoLive property to 30000.
- D. Set the DISP.contentManagerCacheService.cacheValidatorTimetoLinger property to 30000.

Correct Answer: C

ValidatorTimetoLive determines how long data objects remain in the cache. After the Validator timer expires objects are considered Invalid and have to be fetched from Cm again. Value is in ms, and default is 900000.

### QUESTION 2

An administrator is implementing security by modifying access to the secured functions and secured features. Which statement is true?

- A. A hyperlink on the Capabilities page represents a secures function that contains secured features.
- B. Granting execute permission on a secured function automatically grants execute permission to all secured features.
- C. As part of the initial security implementation, an administrator must grant access to secured functions and features to the predefined roles.
- D. To view a list of the second functions and features available to them, a user must contact their administrator because only the administrator can perform this function.

Correct Answer: B

You set access to the secured functions and features by granting execute permissions for them to specified namespaces, users, groups, or roles. Incorrect Answers:

C: When a content store is initialized, the initial permissions for the secured functions and features are created. The permissions define which of the predefined and built-in Cognos groups and roles have access to which secured functions and features, and the type of access. The initial permissions grant unrestricted access to IBM Cognos software because the built-in role System Administrators includes the group Everyone in its membership.

### QUESTION 3

A CQM report successfully runs in another environment but fails in IBM Cognos Analytics. Environments are identical except for the versions.

How could the issue be identified?

- A. Perform a UDA trace.
- B. Modify the ipfserverconfig.xml.
- C. Increase the logging level of the Query service.
- D. Restart the IBM Cognos Analytics service to eliminate all remaining BIBus processes.

Correct Answer: B

The method for performing a UDA trace is different in Cognos 10 to previous versions due to the removal of the Cognos Logging Console Program. This is specific to CQM datasources.

Please follow these steps:

1.

Navigate to /configuration

2.

Rename ipfUDAclientconfig.xml.sample to ipfclientconfig.xml

3.

Wait 30 seconds

4.

Now run any reports that you wish to use the trace on.

5.

After running the reports the trace will generate a file named "UDA\_Trace.log" within /logs. The log name and location can be changed by the user by editing the ipfclientconfig.xml file.

6.

Rename ipfclientconfig.xml to ipfUDAclientconfig.xml.sample to turn off the tracing.

This trace records all database activity so should be turned off as soon as the possible.

#### QUESTION 4

An administrator needs to address an environment that is not running optimally and conduct an architecture review.

Which performance attributes should be considered?

- A. capacity, scalability, availability
- B. gateways, application servers, Content Manager

- C. IBM Cognos implementation, capacity, infrastructure
- D. infrastructure, gateways, application servers, scalability

Correct Answer: C

Conduct an architecture review to assess the physical architecture and software installation.

### QUESTION 5

An administrator must troubleshoot query execution related issues in a DQM executed report. How is this achieved?

- A. By default, settings to trace DQM Query execution are enabled in the system.
- B. Open IBM Cognos Configuration, under IBM Cognos Services/IBM Cognos, select QueryService and check Enable Query execution trace and view logs in /logs/XQE.
- C. Open IBM Cognos Administration portal, on the Configuration tab, select Dispatchers and locate QueryService and check Enable Query execution trace and view logs in /logs/XQE.
- D. Edit the install\_location/configuration/qfs\_config.xml.sample file and set , save as qfs\_config.xml, restart services.

Correct Answer: C

A query execution trace (run tree trace) shows queries that run against a data source. You use the trace to troubleshoot query-related issues.

You can find execution trace logs in the following location:

c10\_location/logs/XQE/reportName/runtreeLog.xml.
