QUESTION 1

A customer has deployed an IBM Security Access Manager V9.0 solution to protect web applications. After the initial authentication between the client and WebSEAL, WebSEAL can build a new Basic Authentication header and use the –b option to provide the authenticated Security Access Manager user name (client\\'s original identity) together with a predefined static password across the junction to the backend server.

Which configuration option will accomplish this?

A. - gso

B. –b filter

C. –b ignore

D. -supply

Correct Answer: D
