**QUESTION 1**

A z/OS batch application called ORDRPROC processes order messages. Each message is 30 to 40 KB in size. In the past, a non-shared local queue was used and the application was always run on the same single LPAR.

As part of a 24/7 high availability project, the queue is to be converted into a shared queue, so the processing can take place on any of four LPARs, but it is critical that the messages are processed by only one instance of the batch server program at a time.

The shared queue is to use an existing Coupling Facility structure named BATCHMSGs which is configured to offload messages larger than 24 KB to shared message data set (SMDS).

In addition to setting QSGDISP(SHARED), which attributes (amongst others) must the system administrator use within the define QLOCAL command for the new shared queue to support these requirements?

- A. OFFLOAD(SMDS) SHARE
- B. DEFSOPT(SHARED) NOTRIGGER
- C. CFSTRUCT(BATCHMSGs) NOSHARE
- D. STGCLASS(SHARED) PROCESS(ORDRPROC)

Correct Answer: C

QUESTION 2

After a system crash, a system administrator tried to start queue manager QM1, but it failed with this error:

AMQ7047: An unexpected error was encountered by a command. In the queue manager error log, this error was reported:

AMQ7472: Object QM1, type catalogue damaged.

The queue manager was using linear logging.

The system administrator needs to recover the queue manager. How can the system administrator do this?

- A. Restore the queue manager active logs from a back up.
- B. Run rcdmqing command against the queue manager object.
- C. Run rcrmobj command against the queue manager object
- D. Delete the file containing the damaged queue manager object and restart the queue manager.

Correct Answer: D

QUESTION 3

A system administrator needs to check the settings of a channel definition table on a client system that has only MQ client software installed.

How can the system administrator check the local channel definition table on the client system?

- A. Export the MQCHLTAB environment variable.
- B. Use a text editor to view the AMQCLCHL.TAB file.
- C. Use MQ Explorer to view the client connection settings.
- D. Enter runmqsc -n and use the DIS CHL(CLNTCONN) command.

Correct Answer: A

QUESTION 4

IBM MQ will be installed into a multi-instance queue manager environment. After defining the shared file system, the system administrator created the queue manager QMA on the first server. How can the system administrator create the second queue manager in order for it to be the standby instance?

- A. Change the STANDBY option in the queue manager object to PERMITTED.
- B. Use dspmqinf on the first server and addmqinf on the second server.
- C. Use crtmqm with the option that allows the queue manager to be created as the standby.
- D. Use crtmqm to create the queue manager on the second server and copy /var/mqm from the first server.

Correct Answer: A

QUESTION 5

A system administrator is planning to enable events when queue manager objects are created, changed or deleted.

Which events should the system administrator enable?

- A. Logger
- B. Performance
- C. Configuration
- D. Queue Manager

Correct Answer: C
