QUESTION 1

What happens to an alert in the IBM Tivoli Storage Manager Operations Center if the message that triggered it does not reoccur within the default time interval?

- A. The alert is closed.
- B. The alert is deleted.
- C. The alert is marked inactive.
- D. An error message is generated.

Correct Answer: C

QUESTION 2

Which two statements are true when performing virtual machine backups directly to tape?

- A. Single file restores need more time.
- B. An additional disk pool is required for the VMware backups of user data.
- C. TSM meta data (control data) must reside on a disk-based storage pool.
- D. The environment is adjusted automatically for optimum tape performance.
- E. The same functionality is available regardless of the type of storage pool used.

Correct Answer: AC

QUESTION 3

What is a function of Automated System Recovery (ASR) in IBM Tivoli Storage Manager?

- A. It restores the ASR database to its last known state.
- B. It automatically performs ASR database backups at a set interval.
- C. It backs up ASR files in preparation for recovering the AIX disk configuration information and system state in the event of a catastrophic system or hardware failure.
- D. It backs up ASR files in preparation for recovering the Windows disk configuration information and system state in the event of a catastrophic system or hardware failure.

Correct Answer: D

QUESTION 4

Which task or process can be included in an administrative schedule?

- A. client backup
- B. import database
- C. ingestion of data
- D. database backup

Correct Answer: D

QUESTION 5
