QUESTION 1

A system administrator needs to install the IBM Installation Manager for WebSphere Application Server Network Deployment V8.0 using a non-root account. What step must the administrator take so that the installation can be managed by two different non- root user accounts? Install the IBM Installation Manager:

- A. in group mode.
- B. in non-administrator mode.
- C. using the configurator administrator role.
- D. using a primary and secondary account.

Correct Answer: A

QUESTION 2

A system administrator needs to add a business capability to an enterprise application (EAR). The capability is an OSGi bundle distributed as a separate Java archive (JAR) by a third-party application provider. How should the administrator do this?

- A. Deploy EAR and define the JAR as a shared library reference.
- B. Include JAR in EAR's lib directory and deploy the modified EAR.
- C. Create a business-level application (BLA) with the EAR and the JAR.
- D. Modify the EAR deployment descriptor's library-directory to include the directory with the JAR.

Correct Answer: C

QUESTION 3

A system administrator needs to submit a wsadmin job to change the configuration of an enterprise application within a flexible management environment. What should the administrator do? Connect to:

- A. Node Agent
- B. Administrative Agent
- C. Job Manager
- D. Work Manager
- E. Deployment Manager

Correct Answer: CE

QUESTION 4

Performance issues have caused several high profile outages in a WebSphere Application Server Network Deployment V8.0 environment. The application developer has isolated the problem to one specific application. To assist with the problem diagnosis a system administrator has been asked to enable the highest level of WebSphere tracing available.

How should the system administrator accomplish this? Enable tracing and set the level to:

- A. *
- B. all
- C. finest
- D. debug

Correct Answer: B

QUESTION 5
