QUESTION 1

A process chain has encountered an error before its conclusion. What are possible troubleshooting steps? There are 3 correct answers.

- A. Review the message in the context menu of the failed step.
- B. Repeat the scheduled trigger of the process chain.
- C. If available, use the Manage object context menu option of the failed step.
- D. Use either the Repeat or Repair context menu option of the failed step.
- E. Reschedule the process chain for the next day.

Correct Answer: ACD

QUESTION 2

Which of the following process chain collector steps prevent multiple executions of a successor process? There are 2 correct answers.

- A. The Start process step triggered by a Meta Chain.
- B. The Exclusive OR process step.
- C. The OR process step.
- D. The Attribute Change Run process step.
- E. The AND process step.

Correct Answer: BE

QUESTION 3

When should you use the Generic Data Extractor tools to create a data source? There are 3 correct answers.

- A. When Business Content does not contain a data source for your application.
- B. When you use customer written programs in R/3 to populate your tables.
- C. When the data to be extracted is highly granular.
- D. When the application does not feature its own data extraction method.
- E. If you want to extract data without delta extractions.

Correct Answer: ABD

QUESTION 4

what does SAP recommend you do to improve the overall reporting performance of a standard InfoCube in SAP BW 7.4? (3)

- A. Create aggregates
- B. Replace the InfoCube by a SPO
- C. Use the process type "Fill OLAP cache" in a process chain
- D. Use navigation attributes instead of dimension characteristics
- E. Use several InfoCubes as PartProviders of a MultiProvider instead of a single standard InfoCube

Correct Answer: ABE

QUESTION 5

You are executing a process chain to load transaction data from an SAP source system via a standard DSO into an InfoCube but NO DATA arrives in the InfoCube. What are possible reasons for this? (2)

- A. The data does NOT meet the selection criteria of the DTP
- B. The data comprises an error and the error handling setting is set to "Cancel Request, Do Not Track Records, No Update"
- C. The Data Flow object has NOT been activated
- D. The Integrity check is NOT switched on in the transformations

Correct Answer: AB
