-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

You use the `hadoop fs put` command to add a file "sales.txt" to HDFS. This file is small enough that it fits into a single block, which is replicated to three nodes in your cluster (with a replication factor of 3). One of the nodes holding this file (a single block) fails. How will the cluster handle the replication of file in this situation?

- A. The file will remain under-replicated until the administrator brings that node back online
- B. The cluster will re-replicate the file the next time the system administrator reboots the NameNode daemon (as long as the file's replication factor doesn't fall below)
- C. This will be immediately re-replicated and all other HDFS operations on the cluster will halt until the cluster's replication values are resorted
- D. The file will be re-replicated automatically after the NameNode determines it is under-replicated based on the block reports it receives from the NameNodes

Correct Answer: D

---

**QUESTION 2**

Which two features does Kerberos security add to a Hadoop cluster? (Choose two)

- A. User authentication on all remote procedure calls (RPCs)
- B. Encryption for data during transfer between the Mappers and Reducers
- C. Encryption for data on disk ("at rest")
- D. Authentication for user access to the cluster against a central server
- E. Root access to the cluster for users `hdfs` and `mapred` but non-root access for clients

Correct Answer: AD

---

**QUESTION 3**

You have a cluster running with the fair Scheduler enabled. There are currently no jobs running on the cluster, and you submit a job A, so that only job A is running on the cluster. A while later, you submit Job B. now Job A and Job B are running on the cluster at the same time. How will the Fair Scheduler handle these two jobs? (Choose two)

- A. When Job B gets submitted, it will get assigned tasks, while job A continues to run with fewer tasks.
- B. When Job B gets submitted, Job A has to finish first, before job B can get scheduled.
- C. When Job A gets submitted, it doesn't consume all the task slots.
- D. When Job A gets submitted, it consumes all the task slots.

Correct Answer: B

---

#### QUESTION 4

You are running a Hadoop cluster with a NameNode on host mynamenode. What are two ways to determine available HDFS space in your cluster?

- A. Run `hdfs fs du /` and locate the DFS Remaining value
- B. Run `hdfs dfsadmin report` and locate the DFS Remaining value
- C. Run `hdfs dfs /` and subtract NDFS Used from configured Capacity
- D. Connect to `http://mynamenode:50070/dfshealth.jsp` and locate the DFS remaining value

Correct Answer: B

---

#### QUESTION 5

You are running Hadoop cluster with all monitoring facilities properly configured.

Which scenario will go undeselected?

- A. HDFS is almost full
- B. The NameNode goes down
- C. A DataNode is disconnected from the cluster
- D. Map or reduce tasks that are stuck in an infinite loop
- E. MapReduce jobs are causing excessive memory swaps

Correct Answer: B
