QUESTION 1

What is XPath?

- A. An error in XML document, where beginnings and endings of two tags cross (eg,), cross-path
- B. A test design method in which a test case traverses all crossing paths of an algorithm or activity diagram of use case
- C. A query language for selecting nodes from an XML document
- D. An element of Test Execution Layer that allows one to cross-reference different SUTs

Correct Answer: C

QUESTION 2

Which of the following statements about XPath is true?

- A. XPath uses CSS selectors to identify nodes in documents
- B. XPath is only used to find predefined tags in documents
- C. XPath is used to gather input from users for documents
- D. XPath traverses and finds XML nodes through XPath syntax expressions

Correct Answer: B

QUESTION 3

Which of the following sentences is correct?

- A. There is a way of taking the screenshots of modal message boxes with error messages on web pages with Selenium WebDriver library
- B. There is no way of taking the screenshots of message boxes with error messages, because the situation when an error is shown on a webpage means that an automated test script has thrown an exception
- C. There is no way of navigating on a web page when modal message box is shown, so there is no way of taking a screenshot
- D. There is a way of taking a screenshot of modal message box with error message, but it has to be done outside of Selenium WebDriver library e.g., with Selenium Screenshot library

Correct Answer: A

QUESTION 4

Which of the following BEST explains how Selenium fits within the test automation architecture?

- A. Selenium supports designing test cases
- B. Selenium interfaces with the SUT
- C. Selenium supports implementing test cases
- D. Selenium is a tool, not part of the test automation architecture

Correct Answer: C

QUESTION 5
