QUESTION 1

A dual-band 802.11ac AP must be powered by PoE. As a class 4 device, what power level should be received at the AP?

A. 30 W

B. 12.95 W

C. 25.5 W

D. 15.4 W

Correct Answer: C

QUESTION 2

What primary metric of scanning can stations use to select the best AP for connectivity to the desired BSS?

A. Signal strength of AP beacons received.

B. PING latency when testing against an Internet server.

C. FCS errors in frames transmitted to and from the AP.

D. Throughput speed in Mbps.

Correct Answer: A

QUESTION 3

What statement describes the authorization component of a AAA implementation?

A. Validating client device credentials against a database.

B. Implementing a WIPS as a full-time monitoring solution to enforce policies.

C. Granting access to specific network services or resources according to a user profile.

D. Verifying that a user is who he says he is.

Correct Answer: C

QUESTION 4

You are configuring an access point to use channel 128. What important fact should be considered about this channels?

![Pass2Lead logo](https://Pass2Lead.com)
A. It is a 22 MHz channel so it will overlap with the channels above and below it

B. It is a 2.4 GHz frequency band 40 MHz channel, so it should not be used

C. It is a channel that is unsupported by most access points

D. It is a channel that likely requires DFS when used

Correct Answer: D

QUESTION 5

What factor will have the most significant impact on the amount of wireless throughput available to each station within a BSS?

A. The Layer 3 protocol used by each station to transmit data over the wireless link

B. The number of client stations associated to the BSS

C. The power management settings in the access point beacons

D. The presence of co-located (10m away) access points on non-overlapping channels

Correct Answer: B
