QUESTION 1

A network administrator enters the BGP command neighbor 10.0.2.1. The BGP router does NOT have any route to the 10.0.2.0 network. What will happen?

- A. The router will form a successful adjacency with its 10.0.2.1 neighbor. The BGP state will be listed as connect.
- B. The router will not form a successful adjacency with its 10.0.2.1 neighbor.
- C. It will send gratuitous ARP messages to attempt to discover a route to its 10.0.2.1 neighbor.
- D. It will send an ICMP packet to attempt to reach its 10.0.2.1 neighbor.

Correct Answer: B

QUESTION 2

```
OS10-A# show vrrp 100
```

```
Interface           : vlan100           IPv4 VRID           : 100
Version             : 2                   State               : master-state
Primary IP          : 10.0.100.1         Master IP           : 10.0.100.2
Virtual MAC         : 00:00:5e:00:01:64    Accept Mode         : true
Admin Priority       : 110              Operational Priority : 110
Advertise Interval  : 1                   (in secs)          Hold Time            : 0
Preempt Status      : false
Virtual IP address  : 10.0.100.1
master-transitions  : 1                   advertise-rcvd      : 2
advertise-interval-errors : 0         ip-ttl-errors       : 0
priority-zero-pkts-rcvd : 0         priority-zero-pkts-sent : 0
invalid-type-pkts-rcvd  : 0         address-list-errors  : 0
pkt-length-errors    : 0
```

Refer to the exhibit.

What is the VRRP state of OS10-A after a router with a default VRRP admin priority with VRID100 comes online?

- A. master-state
- B. standby-state
- C. backup-state
- D. primary-state

Correct Answer: A

QUESTION 3

Which command shows whether a LAG protocol is static or dynamic on a Dell EMC Networking OS10 switch?

- A. show lacp neighbor
- B. show running-configuration lacp
- C. show interface port-channel summary
- D. show port-channel summary

Correct Answer: D
