### QUESTION 1

Universal Containers (UC) is using Salesforce Performance Edition. They are planning to host weekly training sessions for the next four weeks. Each training will be five days long and a new set of trainees will attend every week. UC wants to train these users on samples of production data and delete all the data generated during the training session at the end of the week.

What optimal option should a technical architect recommend?

- A. Refresh a Partial Copy sandbox every weekend and load data needed using data loader.
- B. Refresh a Partial Copy sandbox every weekend and include an appropriate sandbox template.
- C. Refresh a Developer Pro sandbox every weekend and load data needed using data loader.
- D. Refresh a Developer Pro sandbox every weekend and include an appropriate sandbox template.

Correct Answer: B

---

### QUESTION 2

What are two limitations an architect should consider when designing a strategy for managing technical reference data, with multiple related objects?

Choose 2 answers

- A. Apex CPU limits
- B. Circular relationships
- C. Depth of nested relationships
- D. HTTP response size

Correct Answer: BC

---

### QUESTION 3

Sales and Service products will be created by two teams that will use second-generation managed package(s). The Sales team will use a specific function of the Service product, but the architect wants to ensure that this team will only use the functions exposed by the Service team. No other team will use these same functions.

What should an architect recommend?

- A. Create two second generation managed packages with the same namespace and set the methods that should be shared with the `@namespaceAccessible` annotation.
- B. Create two managed packages with Sales and service namespaces. Set the methods to be shared with the `?alesAccessible` annotation
- C. Create a managed package with both products and create a code review process with an approver from each team.

D. Create two managed packages. Create an authentication function in the Service package that will return a token if a Sales user is authorized to call the exposed function. Validate the token in the Service functions.

Correct Answer: D

#### QUESTION 4

Universal Containers is adopting Scrum as an agile methodology and wants to choose a software tool to support the adoption. What three key features of an agile development support tool should an architect look for? Choose 3 answers

- A. Sprint backlog management
- B. Email notifications when work is created or changed
- C. Product backlog prioritization
- D. Work (for example, user stories or tasks) assignment
- E. Kanban board

Correct Answer: CDE

#### QUESTION 5

In architect is working on a project that relies on functionality that cannot be deployed via the Metadata API. What is the best practice for making sure these components are deployed successfully?

- A. Generate and deploy a change set that enables the required settings
- B. Generate and install a managed package that enables the required settings
- C. Utilize the metadata API's deployAllComponents call
- D. Document deployment steps for any components that cannot be automatically deployed

Correct Answer: D
