### QUESTION 1

An enterprise geodatabase administrator needs to enable field workers to check out and edit versioned features that participate in a topology. The field edits will be performed on laptop computers using ArcGIS Desktop with a Basic license. Which technology should the administrator recommend to store data on the field workers' laptops?

- A. Workgroup geodatabase
- B. PostgreSQL database
- C. File geodatabase
- D. SQLite database

Correct Answer: C

---

### QUESTION 2

A company would like all imagery to be stored in an Esri spatial database and to be accessible through SQL. Which spatial type should the data creator use to store imagery in the enterprise geodatabase?

- A. LONGRAW
- B. BLOB
- C. ST\_Raster
- D. RASTERBLOB

Correct Answer: B

---

### QUESTION 3

An administrator adds a new feature class to an enterprise geodatabase using database tools. A user wants to implement topology rules on the feature class to determine if polygon overlap.

What does the user have to verify?

- A. The data is registered with the geodatabase.
- B. The data is registered as versioned with the move edits to base option.
- C. The data has attribute indexes.
- D. The data is a stand-alone feature class.

Correct Answer: B

---

**QUESTION 4**

Adding a definition query to a feature class in a map causes poor performance of the layer. What should an administrator recommend?

- A. Create attribute indexes on the filed used in the query.
- B. Create attribute indexes on all the filed in the feature class.
- C. Refresh the definition query
- D. Turn off and on the layer in the map.

Correct Answer: B

---

**QUESTION 5**

Which user in the geodatabase can register an object as versioned?

- A. A user with edit permissions on the object
- B. A user who owns the data
- C. A user with administrator privileges in the geodatabase
- D. A user who owns a transaction version

Correct Answer: D
