QUESTION 1

Which of the following are Ansible modules? (Choose all that apply.)

- A. get_dnshostname
- B. setup
- C. yum
- D. ping

Correct Answer: BCD

yum: this module was covered in the lesson and can be found in Ansible documentation.

QUESTION 2

Which of the following is a good use case for an ad-hoc command? (Choose all that apply.)

- A. Experimenting with an Ansible Module
- B. Installing the netcat utility on application servers
- C. Checking the free memory on a particular group of hosts
- D. Upgrading a custom 3-tier application stack

Correct Answer: ABC

Installing netcat is a single yum command that would be easily run across a group of common servers with an Ansible ad-hoc command. A single command run against several servers is a perfect use case for an ad-hoc command. Writing a playbook would be overkill.

QUESTION 3

What Ansible variable allows access to internal Ansible data?

- A. Ansible Facts
- B. Magic Variables
- C. Dictionary Variables
- D. Environment Variables

Correct Answer: B

Magic variables allow access to internal Ansible data such as host groups and inventory hosts.

QUESTION 4

Which of the following are shared between roles on the same system? (Choose all that apply.)

- A. Templates
- B. Tasks
- C. Variables
- D. Handlers

Correct Answer: CD

Variables are shared across roles on the same system. This is why namespacing is important. Handlers are shared across roles on the same system.

QUESTION 5

What is the defaults directory used for within a role?

- A. The defaults directory is for defining default values for variables if no other value is provided.
- B. The defaults directory is where you define which plays of a role will be used by default.
- C. The defaults directory is for defining variable values that override other variables used in a playbook using the role.
- D. The defaults directory stores configurations that override ansible.cfg.

Correct Answer: A

Variables defined within defaults are given the lowest precedence and are only used when no other value is provided.
