QUESTION 1

Which of the following statements about client deduplication and media deduplication are true? (Multiple Choice)

A. Client deduplication is implemented as follows: At the source end, hash comparison is performed for data blocks to be transmitted. If a data block has been transmitted, only the corresponding hash index value will be transmitted.

B. In terms of media deduplication, in-line processing provides higher data transmission performance than post processing.

C. Media deduplication saves bandwidth resources and does not consume resources at the source end.

D. Client deduplication consumes resources at the source end but saves bandwidth resources.

Correct Answer: AD

QUESTION 2

A remote replication consistency group is in normal state. Before initiating a primary/secondary switchover for that consistency group, which operation must be performed?

A. Disable write protection at the secondary site.

B. Change the restoration policy to manual.

C. Split pairs.

D. No operation is required.

Correct Answer: C

QUESTION 3

Which alarm securities are supported by OceanStor BCManager eReplication? (Multiple Choice)

A. Message

B. Info

C. Warning

D. Major

E. Critical

Correct Answer: BCDE

QUESTION 4

Which of the following are Huawei remote DR Solutions? (Multiple Choice)

A. Active-Active DC Solution

B. Active-Passive DR Solution

C. Local HA Solution

D. Geo-Redundant Solution

Correct Answer: BD

QUESTION 5

Which of the following statements about backup type selection is false?

A. If a schedule includes cumulative incremental backup but does not include full backup, all files are backed up in the first cumulative incremental backup.

B. It is recommended that full backup, differential incremental backup, and cumulative incremental backup be used together to address backup needs.

C. A backup policy uses a combination of full backup and differential incremental backup. If the system fails and the administrator wants to restore the latest data, data that is backed up through the latest full backup and all the differential incremental backups since the latest full backup is needed.

D. Differential incremental backup saves storage space to the maximum and has a minimal backup window.

Correct Answer: B
