### QUESTION 1

Which of the following descriptions of the import parameters for the physical tape of the VTL6900 is correct?

- A. copy Mode: This mode to develop physical tape data copy to the corresponding virtual tape, at the same time the development of the physical tape recycling
- B. Direct AccessMode: This mode only copies the beginning of the physical tape 10MB data, contains the data stored on the tape backup software, without having to copy the backup data
- C. Recycle Mode: This mode is to block copy mode, the entire tape is copied to the virtual tape
- D. Recycle Mode: This mode will automatically recycle the tapes that have passed the data retention period

Correct Answer: D

---

### QUESTION 2

In the mirroring scenario of OceanStor VIS6600T, an engineer detected an abnormal mirroring alarm on the VIS6600T. When you login to the ISM interface, you can view the mirror status of the volume in the corresponding logical disk group based on the alarm and find that the status of a volume in the mirror is NODEVICE. The reason may be: (multiple choice)

- A. The disk on the array on which the failed mirrored volume failed
- B. Array where the failed mirrored volume is powered down
- C. The RAID array is degraded on the array where the failed mirrored volume is residing, and the hot spare is being rebuilt
- D. All optical links between the VIS 6600T and the array in which the failed mirror volume is located have failed

Correct Answer: ABD

---

### QUESTION 3

Which of the following statements regarding the Huawei Oceanstor V3 hierarchical storage and Smart Cache is correct?

- A. A client business IO load random read that accounts for more than 60% using SATA, SAS for staging storage, use SSD to do cache, so it will effectively reduce costs and improve random performance indicators
- B. If hot spot data is scattered and changing rapidly, it is recommended to use tiered storage
- C. If there are many SSDs and hotspots, Smart Cache is the best choice
- D. If you have a small amount of SSD data, use a tiered storage disk for more utilization

Correct Answer: A

---

**QUESTION 4**

In a manual recovery process, which of the following operations is not required? (Multiple choice.)

- A. Stop the current production business, delete the host mapping.
- B. Adding the remote device to the original production side array.
- C. With the disaster recovery array as the master LUN and the original production array as the slave LUN, create the remote replication relationship between the DR and the production end and wait for the initial synchronization to be completed.
- D. Make an incremental synchronization.
- E. Delete the original production array consistency group.

Correct Answer: ABE

---

**QUESTION 5**

When formatting a newly created LUN on OceanStor V3, LUN formatting fails. Which of the following conditions will cause this problem? (Multiple choice)

- A. The RAID group where the LUN resides is downgraded or invalidated
- B. The connection between the host and the storage is broken
- C. Formatting process made a master-slave switching operation
- D. A controller reset

Correct Answer: AD
