QUESTION 1

Users use vsphere 5.5 to build business virtualization. In the course of the operation it was found that a host was using too many SCSI reservations, leading to vmfs performance degradation. What method can be used to eliminate the root cause of SCSI reservation conflicts? (Multiple choice.)

- A. Reduce the number of snapshots.
- B. Reduce the number of virtual machines per LUN.
- C. Increase the number of LUNs and limit the number of hosts accessing the same LUN.
- D. Change the type of virtual disk created.

Correct Answer: ABC

QUESTION 2

To use the storage space of OceanStor V3 more efficiently, a customer has specified file system quotas for different departments. If a soft quota alarm is generated for the file system used by department A, which methods can be used to clear the alarm and ensure that new data can be successfully written?

(Multiple Choice)

- A. Delete the files that department A does not need to use.
- B. Enable SmartDeduplication for the file system used by department A.
- C. Expand the file system quota for department A.
- D. Enable SmartCompression for the file system used by department A.

Correct Answer: BCD

QUESTION 3

Which of the following are correct regarding the Simpana backup software? (multiple choice)

- A. data Reader: The flow of raw data read from the client, set in each client
- B. Data streams: client to MediaAgent data transfer stream, set in the storage strategy
- C. Device Streams: MediaAgent to storage Media data transfer stream, set in each sub-client
- D. The value of Data Reader must be less than the value of Device Streams

Correct Answer: ABC

QUESTION 4

Erasure code redundancy technology is a data file is divided into ODC (M logo) equal length data blocks, generated by encoding RDC. Any of the RDC fragments can be restored out of the original file, which can tolerate up to ODC node failure, to achieve the purpose of data protection.

- A. True
- B. False

Correct Answer: B

QUESTION 5

Which of the following is true about the principle of Huawei Oceanstor V3 smart cache: (multiple choice)

- A. When an IO arrives at the storage system, in order to avoid affecting the write performance, the data in the smart cache will not be any changes due to the IO
- B. When reading the data in the missing smart cache, the smart cache pool directly forwards the read IO request to the HDD
- C. If OceanStor V3 is shared between services A and B, the same custom smart cache partition can be used
- D. The system generates a default smart cache partition for each controller by default

Correct Answer: BCD
