QUESTION 1

Which of the following statements about the logical structure of the Oracle database is correct?

- A. Tablespace is a collection of multiple segments
- B. An extent corresponds to a block
- C. A segment is a collection of multiple extents
- D. Block is the basic unit of I/O operations. The default value is 4 KB.

Correct Answer: C

QUESTION 2

Data backup can be used to prevent logical errors such as misoperations and viruses. Data backup ensures that the system can be restored to a correct logical version.

- A. True
- B. False

Correct Answer: A

QUESTION 3

In the storage disaster recovery and backup solution, the RPO of a storage product is 30 minutes and the RTO is 15 minutes. Which of the following statements are correct?

- A. When the storage system is faulty, the time difference between the production site and the DR site may be 45 minutes.
- B. The duration from the time when a fault occurs to the time when the service is suspended to the time when the service is recovered may be 45 minutes.
- C. When the storage system is faulty, the time difference between the production site and the DR site may be 30 minutes.
- D. The period from the time when a fault occurs to the time when the service is suspended to the time when the service is recovered may be 15 minutes.

Correct Answer: D

QUESTION 4

Which of the following does not affect the creation of cloud hosts in the Cloud Management Platform (CMP)?

- A. Regional information

- B. Alarm Rule Configuration
- C. Network partition
- D. Availability zone information

Correct Answer: B

QUESTION 5

In the cloud data center migration scenario, which of the following statements about configuring eDevLUNs for heterogeneous virtualization is correct?

- A. The read/write policy of eDevLUNs "write-back" applies to random access services, ensuring that data in the cache is cached as long as possible to improve the read hit ratio.
- B. The default read/write policy of eDevLUNs is applicable to common services to balance the hit ratio and disk access performance.
- C. The read/write policy "Pairing" of eDevLUNs applies to sequential access services to release cache resources for other services as soon as possible.
- D. When the eDevLUN reads data, it reads the data to be read from the hard disk in advance based on the specified policy.

Correct Answer: A
