QUESTION 1

You are designing a data migration plan for a Hitachi NAS Platform 4000 customer. Your customer enquires about using Data Migrator for reverse migration operations.

Which two statements are correct? (Choose two.)

- A. The entire directory tree is migrated as a single instance
- B. The use of wildcard characters is permitted.
- C. Reverse migration cannot be canceled once initiated.
- D. Reverse migration is a background process.

Correct Answer: BD

QUESTION 2

You are designing a replication solution for a production Hitachi NAS Platform. The solution requires file level replication to another Hitachi NAS Platform. However, there is a concern that the time to detect incremental changes will exceed the RPO. What should be done to reduce the replication time?

- A. Use Transfer Primary Access.
- B. Use the changed directory list option.
- C. Migrate the admin EVS to the node replicating the data.
- D. Create an additional IP address on the source EVS.

Correct Answer: B

QUESTION 3

A customer wants to use XVL for data tiering on their Hitachi NAS Platform 4000. Which three protocols are supported? (Choose three.)

- A. CIFS
- B. NFS
- C. HTTP
- D. FCP

E. HTTPS

Correct Answer: BCE

QUESTION 4

You are designing a solution for a customer who has the following requirements for their NAS environment:

-Synchronous replication for all their filesystems -Automated failover -Stretched cluster at a distance of 50 km Which solution should you recommend?

- A. File Replication
- B. SyncDR
- C. Hitachi Universal Replicator
- D. Object Replication

Correct Answer: B

QUESTION 5

Your customer wants to maintain clustering failover capabilities during an SMU software upgrade procedure What should you do?

- A. Put the cluster into "maintenance mode" while the SMU is upgraded.
- B. Before upgrading the SMU, move the quorum to another SMU.
- C. First upgrade the nodes one at a time followed by the SMU.
- D. Put the SMU into "maintenance mode" while the SMU is upgraded.

Correct Answer: B
