QUESTION 1

A customer expects to store 4 billion objects with an initial HCP configuration. Search is not required at this time. Which configuration will meet the requirements for this customer?

- A. HCP 300 with ten storage nodes
- B. HCP 500 with two storage nodes
- C. HCP 300 with four storage nodes
- D. HCP 500 with eight storage nodes

Correct Answer: A

QUESTION 2

A customer wants to integrate a HCP into their Windows Active Directory environment. They want to use Active Directory for authentication of 27 users. Which two actions should be performed by the customer? (Choose two.)

- A. Upload a username mapping file to the HCP with associations for the required users.
- B. Create 27 users in the HCP with usernames identical to those used in the Active Directory.
- C. Configure the HCP to use Active Directory authentication.
- D. Create a security group in Active Directory then add the names of 27 desired users.

Correct Answer: AC

QUESTION 3

A pre-assembled HCP 300 has been configured using the default factory settings. The next step is to connect the HCP to the customer's corporate network. What information is required from the customer? (Choose two.)

- A. the front-end IP addresses and subnet mask for the HCP nodes
- B. the multicast address to be used by the HCP nodes
- C. the IP address of the front-end gateway router
- D. the MTU size to be used by the HCP nodes

Correct Answer: AC

QUESTION 4

How does a HCP protect object metadata?

- A. The metadata protection level is matched to the DPL level set for data;
- B. The administrator sets the DPL policy required for all HCP metadata;
- C. The MDPL mechanism automatically creates two copies of the metadata;
- D. The administrator must manually execute the metadata copy command.

Correct Answer: C

QUESTION 5

In a SAIN based HCP solution, which RAID protection scheme is considered standard use with an AMS 2000 system?

- A. RAID 5 (6+1)
- B. RAID 6 (5+2)
- C. RAID 6 (6+2)
- D. RAID 5 (7+1)

Correct Answer: B
