QUESTION 1

A customer would like a CCI script to resynchronize all of the ShadowImage volumes on a USP100 defined in CCI. The customer is running the latest CCI version on a Solaris server using the korn shell. Several CCI device group names are used. The primary volumes are defined in horcm0.conf and the secondary volumes are defined in horcm1.conf. Which command would be used in a script to list all of the ShadowImage CCI device group names prior to executing the Pairresync command?

- A. raidqry -g
- B. raidscan -g
- C. pairdisplay -g
- D. cat /etc/horcm0.conf | grep group

Correct Answer: A

QUESTION 2

You have been asked to install HiCommand Protection Manager (HPtM) software in an environment where integration with backup software is required. Which three must be in place before you begin the installation? (Choose three.)

- A. RAID Manager CCI
- B. Netbackup MS SQL server agent
- C. Netbackup or Backup Exec software
- D. HiCommand Device Manager software
- E. ShadowImage software or Copy-on-Write Snapshot software

Correct Answer: ACE

QUESTION 3

A customer uses Universal Replicator for Disaster Recovery for several mission critical applications. A disaster occurs at the production site and network communication is lost between the sites. Which two actions should be used to split the Universal Replicator pairs from the recovery site so the secondary volumes can be used for application recovery? (Choose two.)

- A. Issue a horctakeover -S command from the recovery site CCI server.
- B. Issue a horctakeover -S command from the recovery site Storage Navigator.
- C. Suspend the Universal Replicator pairs with S-VOL write enabled from the recovery site CCI Server.
- D. Delete the Universal Replicator pairs from the secondary site using the recovery site Storage Navigator.

Correct Answer: AD

QUESTION 4

A customer has a 20TB database on external storage attached to a USP600. The database is used occasionally for high value reference data, It is also prone to corruption. Which steps should the customer take to minimize the impact of the corruption?

- A. The database should be copied permanently to a secondary site using TrueCopy.
- B. Move the REDO logs to the USP internal storage and leave the data files on external storage.
- C. A Copy-On-Write snapshot of the database should be taken once per day for restore in the event of corruption.
- D. A Shadow Image copy of the database should be taken once per day onto internal storage and that should be used instead.

Correct Answer: C

QUESTION 5

Your customer must establish a Three Data Center (3DC) Business Continuity Solution using Universal Storage Platform (USP) systems. Which three tasks are required to setup the solution? (Choose three.)

- A. Enable bi-directional paths between local and distant USPs.
- B. Upgrade the shared memory size of the local and distant USPs.
- C. Upgrade the shared memory size on all three USPs by 25 percent.
- D. Enable bi-directional Fibre Channel links between the primary and local USPs.
- E. Implement Journal Groups of equal size and performance on local and distant USPs.

Correct Answer: ADE
