QUESTION 1

Your data center uses an Ethernet fabric solution for the infrastructure switches.

You must design a redundancy solution that addresses how the servers connect to the members of the Ethernet fabric. Which two statements are true in this scenario? (Choose two.)

A. It is necessary to use MC-LAG.

B. You should connect each server to one member with a two-interface LAG.

C. You should connect each server to two different members.

D. It is not necessary to use MC-LAG.

Correct Answer: CD

QUESTION 2

You are implementing a Virtual Chassis Fabric using QFX5110 devices.

Which two statements are true in this scenario according to Juniper Networks recommendations? (Choose two.)

A. Spine devices must assume the RE role.

B. Leaf devices must have a direct link to all other leaf devices.

C. Spine devices must assume the line card role.

D. Leaf devices must have a direct link to all spine devices.

Correct Answer: AD

QUESTION 3

You plan to deploy a set of SRX Series devices in an active/active chassis cluster with an active/active network infrastructure.

Which two statements are true in this scenario? (Choose two.)

A. This deployment scenario is recommended when firewall services are used extensively for east-west traffic.

B. End-host traffic is services through one SRX node during non-failure conditions.

C. This deployment scenario is recommended when firewall services are used extensively for north-south traffic.

D. End-host traffic is serviced through both SRX nodes during non-failure conditions.

Correct Answer: AD

QUESTION 4

Which two characteristics describe the deployment of high-density chassis switches in a data center? (Choose two.)

A. In EoR deployments, the switches are consolidated in one location.

B. The switches consume a great deal of power, cooling, and space.

C. In ToR deployments, the switches provide more port connections, but with lower speeds.

D. More switches are often needed to accommodate the number of server connections.

Correct Answer: BD

QUESTION 5

Your company is deploying a private cloud based on OpenStack and has selected Contrail Networking as its SDN controller. Which two statements are true in this scenario? (Choose two.)

A. Underlay tunnels are established between virtualized and bare-metal servers.

B. MPLS over UDP tunnels are supported.

C. Overlay tunnels are established between virtualized and bare-metal servers.

D. MPLS over GRE tunnels are supported.

Correct Answer: CD
