**QUESTION 1**

The median cubital is the most common vein used for venipuncture.

Where is it?

- A. In the forearm
- B. In the leg
- C. In the stomach
- D. In the neck

Correct Answer: A

The median cubital vein is located in the forearm, running through the middle of the crook of the elbow. Always remember that although it is the best vein to use in normal healthy adults, all patients are different and other veins may offer a better opportunity for a successful blood draw.

---

**QUESTION 2**

A 17 year old woman who is married arrives at the emergency department of a hospital with an injured arm.

Who must consent to any treatment since this patient is a minor?

- A. Spouse and Minor
- B. Parent
- C. Patient
- D. The parent and the patient

Correct Answer: C

---

**QUESTION 3**

When should patient encounter forms be prepared for staff?

- A. Before the start of the working day
- B. At least an hour before an appointment
- C. In the presence of the patient
- D. Any of the above

Correct Answer: A

Any consultation should be recorded on a patient encounter form.

---

Best practice is to have these ready before the working day begins so that medical staff can have them ready for their appointments.

---

**QUESTION 4**

Which would be considered the correct percentage of nutrient intake by the Dietetic Association for a person's protein intake every 24 hours?

- A. 15%
- B. 65%
