**QUESTION 1**

A customer has a 24-node cluster with all containers configured with RF3. Two different nodes have incurred a simultaneous HDD failure. What is the result?

- A. The Nutanix cluster recognizes the failures and immediately begins to rebuild lost data to three replicas.
- B. Sixty minutes after the failures, a rebuild of the lost data on remaining HDDs begins to restore to three replicas.
- C. The VMs with data on those drives crash, and an HA event occurs, restarting them on a remaining healthy node.
- D. The cluster runs in a degraded state until the failed drives are replaced and the data has been restored to three replicas.

Correct Answer: A

---

**QUESTION 2**

How should an administrator enable secure access to Volumes using a password?

- A. iSER
- B. SAML
- C. CHAP
- D. LDAP

Correct Answer: C

---

**QUESTION 3**

An administrator cables all interfaces on a newly added AHV host and starts migrating VMs to it. Users report that network connections are much slower to the VMs after the migration. What is a possible reason for this issue?

- A. The host still has the default bond configuration
- B. The VMs do not use the same interfaces as the CVM
- C. The network is slower because the host is farther away
- D. The CVM on the node has not fully joined the cluster

Correct Answer: D

---

**QUESTION 4**

An administrator needs to run a mixed Exchange and SQL workload with a guaranteed amount of container space for each application. How should the administrator meet this requirement?

- A. Create one container and set capacity reservation
- B. Create two containers and reserve space for containers
- C. Create one container and enable compression
- D. Create two containers and reserve space for vDisks

Correct Answer: D

---

#### QUESTION 5
