#### QUESTION 1

Which statement is true regarding application containerization?

- A. Application containerization requires the Linux operating system.
- B. Application containerization provides increased portability.
- C. Application containerization increases performance of virtual machines.
- D. Application containerization is designed for massive data sets.

Correct Answer: B

---

#### QUESTION 2

Regarding system high availability, what is the reference used to determine reliability?

- A. the amount of data available to users and how quickly they can access it, measured in IOPS
- B. the number of hard drives available in a system, with more drives indicating more reliability
- C. the number of data network components available between the data and the user, measured in packet per second (PPS)
- D. the number of nines; for example, two nines (99), three nines (99.9), four nines (99.99), and five nines (99.999)

Correct Answer: D

---

#### QUESTION 3

You have a centralized data center running NetApp ONTAP. Your business is deploying a new IoT solution directly managed by the Azure IoT hub. You want to store data in the cloud for use with data analytics.

Which NetApp solution would accomplish this task?

- A. Cloud Secure
- B. Cloud Volumes ONTAP
- C. Cloud Backup Service
- D. Cloud Insights

Correct Answer: B

---

#### QUESTION 4

What are two benefits of managing persistent storage volumes in containers using NetApp Trident? (Choose two.)

- A. Trident provides a unified interface to NetApp storage.
- B. Trident provides automated deployment of Helm charts to Kubernetes.
- C. Trident provides backup/restore capabilities.
- D. Trident dynamically fulfills storage requests.

Correct Answer: AD

---

#### QUESTION 5

Which tool do you use to administer a NetApp Kubernetes Service cluster manager?

- A. kubect1
- B. kubeadm
- C. clustershell
- D. helm

Correct Answer: D
