QUESTION 1

How should you configure MAC notification traps on a supported switch?

- A. Configure them only on ports set as 802.1q trunks
- B. Configure them on all ports except uplink ports
- C. Configure them on all ports on the switch
- D. Configure them only after you configure linkup and linkdown traps

Correct Answer: B

Configure SNMP MAC Notification traps on all access ports (do not include uplinks).

QUESTION 2

Where do you look to determine what network access policy, if any, is being applied to a particular host?

- A. The network access policy configuration
- B. The Port Properties view of the hosts port
- C. The Policy Logs view
- D. The Policy Details view for the host

Correct Answer: A

QUESTION 3

Refer to the exhibit.

General			
User Name	<input type="text" value="admin"/>	Password	<input type="password" value="....."/>
Enable Password	<input type="text"/>		
Protocol			
Type	<input type="text" value="SSH 2"/>		
VLAN ID			
Default	<input type="text" value="2"/>	Dead End	<input type="text" value="112"/>
Registration	<input type="text"/>	Quarantine	<input type="text" value="111"/>
Authentication	<input type="text"/>	Voice	<input type="text"/>
CLI Configurations			
Type:	<input checked="" type="radio"/> None <input type="radio"/> Port Based <input type="radio"/> Host Based		
		<input type="button" value="Apply"/>	<input type="button" value="Reset"/>

If you are forcing the registration of unknown (rogue) hosts, and an unknown (rogue) host connects to a port on the switch, what will occur?

- A. No VLAN change is performed.
- B. The host is disabled.
- C. The host is moved to VLAN 111.
- D. The host is moved to a default isolation VLAN.

Correct Answer: B

The ability to limit the number of workstations that can connect to specific ports on the switch is managed with Port Security. If these limits are breached, or access from unknown workstations is attempted, the port can do any or all of the following: drop the untrusted data, notify the network administrator, or disable the port.

QUESTION 4

What would occur if both an unknown (rogue) device and a known (trusted) device simultaneously appeared on a port

that is a member of the Forced Registration port group?

- A. The port would be provisioned to the registration network, and both hosts would be isolated.
- B. The port would not be managed, and an event would be generated.
- C. The port would be provisioned for the normal state host, and both hosts would have access to that VLAN.
- D. The port would be administratively shut down.

Correct Answer: C

QUESTION 5

By default, if more than 20 hosts are seen connected on a single port simultaneously, what will happen to the port?

- A. The port is added to the Forced Registration group.
- B. The port is disabled.
- C. The port is switched into the Dead-End VLAN.
- D. The port becomes a threshold uplink.

Correct Answer: B
