### QUESTION 4

You are asked to design a secure solution using Fortinet products for a company. The company recently has Web

servers that were exploited and defaced. The customer has also experienced Denial or Service due to SYN Flood attacks. Taking this into consideration, the customer's solution should have the following requirements:

- management requires network-based content filtering with man-in-the-middle inspection
- the customer has no existing public key infrastructure but requires centralized certificate management
- users are tracked by their active directory username without installing any software on their hosts
- Web servers that have been exploited need to be protected from the OWASP Top 10
- notification of high volume SYN Flood attacks when a threshold has been triggered

Which three solutions satisfy these requirements? (Choose three.)

- A. FortiGate
- B. FortiClient
- C. FortiWeb
- D. FortiAuthenticator
- E. FortiDDOS

Correct Answer: ACE

#### QUESTION 5

A data center for example.com hosts several separate Web applications. Users authenticate with all of them by providing their Active Directory (AD) login credentials. You do not have access to Example, Inc.'s AD server. Your solution must do the following:

- provide single sign-on (SSO) for all protected Web applications
- prevent login brute forcing

-

scan FTPS connections to the Web servers for exploits

-

scan Webmail for OWASP Top 10 vulnerabilities such as session cookie hijacking, XSS, and SQL injection attacks

Which solution meets these requirements?

- A. Apply FortiGate deep inspection to FTPS. It must forward FTPS, HTTP, and HTTPS to FortiWeb. Configure FortiWeb to query the AD server, and apply SSO for Web requests. FortiWeb must forward FTPS directly to the Web servers without inspection, but proxy HTTP/HTTPS and block Web attacks.
- B. Deploy FortiDDos to block brute force attacks. Configure FortiGate to forward only FTPS, HTTP, and HTTPS to FortiWeb. Configure FortiWeb to query the AD server, and apply SSO for Web requests. Also configure it to scan FTPS and Web traffic, then forward allowed traffic to the Web servers.

C. Use FortiGate to authenticate and proxy HTTP/HTTPS; to verify credentials, FortiGate queries the AD server. Also configure FortiGate to scan FTPS before forwarding, and to mitigate SYN floods. Configure FortiWeb to block Web attacks.

D. Install FSSO Agent on servers. Configure FortiGate to inspect FTPS. FortiGate will forward FTPS, HTTP, and HTTPS to FortiWeb. FortiWeb must block Web attacks, then forward all traffic to the Web servers.

Correct Answer: D

FSSO agent integrate fortigate with AD then inspect bruteforce,FTPS,HTTP, and HTTPS using fortiweb and then forward all traffic to web server.
