**QUESTION 1**

Which of the following objects cannot use User-ID as a match criteria?

- A. Security Policies
- B. QoS
- C. Policy Based Forwarding
- D. DoS Protection
- E. None of the above

Correct Answer: E

QUESTION 2

Which of the following would be a reason to use an XML API to communicate with a Palo Alto Networks firewall?

- A. So that information can be pulled from other network resources for User-ID
- B. To allow the firewall to push UserID information to a Network Access Control (NAC) device.
- C. To permit sys logging of User Identification events

Correct Answer: B

QUESTION 3

Will an exported configuration contain Management Interface settings?

- A. Yes
- B. No

Correct Answer: A

QUESTION 4

A user complains that they are no longer able to access a needed work application after you have implemented vulnerability and anti-spyware profiles. The user's application uses a unique port. What is the most efficient way to allow the user access to this application?

- A. Utilize an Application Override Rule, referencing the custom port utilized by this application. Application Override rules bypass all Layer 7 inspection, thereby allowing access to this application.
- B. In the Threat log, locate the event which is blocking access to the user's application and create a IP-based exemption for this user.

- C. In the vulnerability and anti-spyware profiles, create an application exemption for the user's application.
- D. Create a custom Security rule for this user to access the required application. Do not apply vulnerability and anti-spyware profiles to this rule.

Correct Answer: B

QUESTION 5

Assuming that the default antivirus profile is installed, match each decoder with its default action. Answer options may be used more than once or not at all.
