QUESTION 1

An engineer's organization system is registered in the following manner: . The engineer created a new indicator type for detecting systems using regex. The engineer would now like the username to be created as a separate `User` indicator automatically once a system is found.

What is the most efficient way for the engineer to achieve this?

- A. Create a custom indicator field named `username` and link it to the internal system indicator
- B. Change the reputation command for the internal system indicator type
- C. Create a new indicator type of the internal username and set a formatting script to extract only the username
- D. Create a new indicator type of the internal username and have the regex included on any string that has dash at the beginning

Correct Answer: B
