QUESTION 1

HOTSPOT

A company uses Power Apps. The company has a model-driven app that accesses a Microsoft Dataverse table. The app is shared with all users who all have the Basic User security role.

You must prevent the users from running and sharing the app.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Requirement

Prevent users from running the app.

Action

▼

Export the app.
Turn off the app.
Remove access to the table.

Prevent users from sharing the app.

▼

Export the app.
Turn off the app.
Remove access to the table.

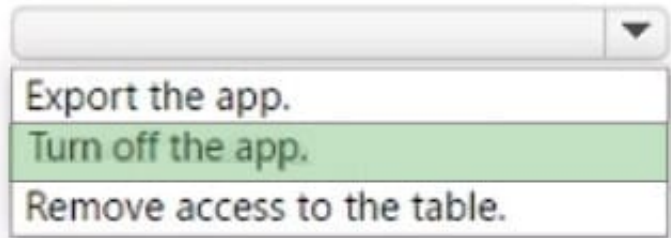

Correct Answer:

Answer Area

Requirement

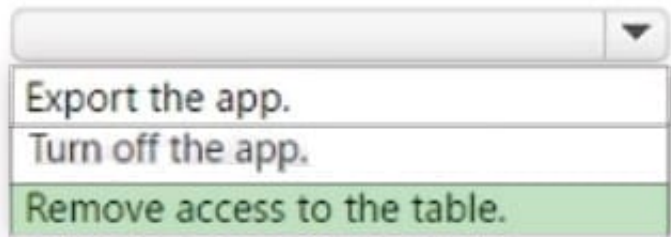

Prevent users from running the app.

Action

Export the app.
Turn off the app.
Remove access to the table.

Prevent users from sharing the app.

Export the app.
Turn off the app.
Remove access to the table.

Box 1: Turn off the app.

Hide a model-driven app from users

Turn off a model-driven app to hide it from users who otherwise would be able to find and run it. When a model-driven app is turned off, it no longer appears in the common places where apps are found, such as the list of model-driven apps

displayed in Power Apps Mobile or Office apps.

While a model-driven app is in a turned off state, it can't be played or shared from make.powerapps.com, however direct links to the app will continue to work.

Box 2: Remove access to the table.

The process for sharing a model-driven app is different from sharing a canvas app. Model-driven app sharing depends on how the Microsoft Dataverse data table privileges are assigned for the tables that are in the app.

Model-driven app sharing basics

Before you share an app, it's helpful to understand the following model-driven app sharing basics:

The app must have at least one security role associated with it, such as Basic User. However, if your app has one or more custom tables, in order for users to work with your custom table's records, you must configure privileges to the custom

tables in a security role.

QUESTION 2

You are creating a canvas app.

You need to display a limited list of choices to the end user. You must standardize the values and appearance of the list across all forms.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Add a drop-down field in the app
- B. Create a Global Option Set
- C. Add a new business rule
- D. Add a component to the component library

Correct Answer: AB

A global Option Set can be shared across entities.

QUESTION 3

DRAG DROP

A company has 500 products. Each product is referenced by a product ID. Each product belongs to one of eight product categories.

You are creating an app to manage requests for new products.

The product categories will never change. Categories are defined in the column itself, not in a separate table. The data must be structured in a way that does not allow for misspellings.

Only two new tables should be created in Microsoft Dataverse:

1.

Products: Holds the products that can be requested.

2.

Requests: Holds the requests for the product ID and quantity. The products are filtered by product category.

You need to identify the data types to use when building the table columns in Dataverse.

Which data type should you use? To answer, drag the appropriate data types to the correct requirements. Each data type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view

content.

NOTE: Each correct selection is worth one point.

Select and Place:

Answer Area

Scenario

Create a column in the Products table that displays the category of the product

Create a column in the Products table for the product ID of the product

Create a column in the Requests table that allows the user to select form a list of available products

Data types

Lookup

Choice

Text

Data types

Data type

Data type

Data type

Correct Answer:

Answer Area

Scenario

Create a column in the Products table that displays the category of the product

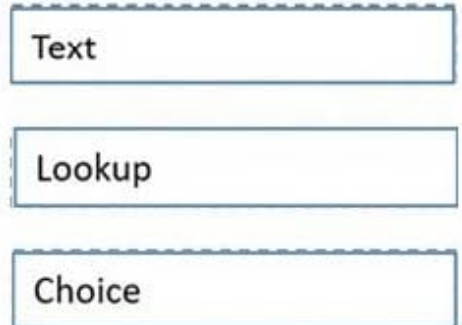

Create a column in the Products table for the product ID of the product

Create a column in the Requests table that allows the user to select form a list of available products

Data types

Data types

Box 1: Text

Text columns can contain text characters. This column type has several format options that will change the presentation of the text.

Box 2: Lookup

When you create a new lookup column you are creating a new Many-to-One (N:1) table relationship between the table you're working with and the Target Row Type defined for the lookup.

Box 3: Choice

You can customize forms (main, quick create, and quick view) and email templates by adding multi-select columns that are called Choices. When you add a choices column, you can specify multiple values that will be available for users to select. When users fill out the form, they can select one, multiple, or all the values displayed in a drop-down list.

<https://docs.microsoft.com/en-us/powerapps/maker/data-platform/types-of-fields>

QUESTION 4

DRAG DROP

You have a model-driven app that has an entity named Marinas. You have an entity named Boats that list the boats associated with each marina.

You must add a list of boats to the Marinas form. You must also add an option for users to select different views including boat owners and marina members.

You need to embed the list of boats associated with a Marina record in the entity form.

In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions		Answer Area
Add a Subgrid component to a form		
Select Show related records and then select the related entity and default view for the subgrid	➤	⬆
Save and publish the form	⬅	⬇
Select the Allow users to change view option		

Correct Answer:

Actions		Answer Area
		Add a Subgrid component to a form
	➤	Select Show related records and then select the related entity and default view for the subgrid
	⬅	Select the Allow users to change view option
		⬆
		Save and publish the form

Step 1: Add a Subgrid component to a form

You add a subgrid component the same way as you add any other component.

Step 2: Select Show related records and then select the related entity and default view for the subgrid

Configure a subgrid component.

Properties available to configure when using a subgrid component on a form using the form designer include:

Show related rows

When selected, the subgrid displays only rows related to the current row that is displayed on the form.

Step 3: Select the Allow users to change view option

Configure a subgrid component.

Properties available to configure when using a subgrid component on a form using the form designer include:

Allow users to change view

When selected, app users can change from the Default view to another view of the table selected in the Table property.

Step 4: Save and publish the form

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/model-driven-apps/form-designer-add-configure-subgrid>

QUESTION 5

You have created a model-driven app that will be used to manage events planned by your firm.

You have set the ownership type of the Events entity to User or team.

Members of the Advertising team have been allocated the AdvertisingTeam security role, with all privileges set to User access. Advertising team members are the only personnel that should be allowed to create or edit event records.

Because all personnel should have the ability to look at event records, you create another security role named OtherPersonnel.

Which of the following is the access level you should set for the Read permission for both security roles?

- A. None Selected
- B. User
- C. Business Unit
- D. Parent: Child Business Units
- E. Organization

Correct Answer: E
