Following Questions and Answers are all new published by VCE Official Exam Center

QUESTION 1

You attempt to activate a port on an MDS using the port-license acquire command and the switch returns the message "port activation license not available".

How would you determine if you have sufficient licenses?

A. Run the show license command to display the available license information.

B. Run the show run command to see the license configuration.

C. Run the show port-resources module command to display the available port resources in a module.

D. Run the show port-license command to display the available port activation licenses.

Correct Answer: D

QUESTION 2

Your company just hired a new employee and the company wants to allow this employee to have read only access to the VMware environment and full access on a test cluster.

How would this be done?

A. At the data center level, grant the employee a role that allows full access.

B. At the data center level, grant the employee a role that allows read only access

C. At the data center level, grant a role with read only access and at the test cluster level, grant a role that allow full access.

D. At the data center level, grant a role with full access and at the test cluster level, grant a role that allows read only access.

Correct Answer: C

QUESTION 3

What are three supported disk types for a Vblock® System 720? (Choose three)

A. EFD

B. FC

C. SAS

D. SATA

E. NL_SAS

Correct Answer: ABD

QUESTION 4

Which vSphere feature would be used to move a virtual machine\\'s back-end files to a different data store?

A. DRS

B. FT

C. Storage vMotion

D. HA

Correct Answer: C

QUESTION 5

A physical server in the Vblock® System 200 is experiencing intermittent problems. What does VCE recommend to log the events?

A. Add a network time protocol (NTP) server to the Cisco UCS instance.

B. Use VCE VisionTM Intelligent Operations to monitor and alert all connectivity issues.

C. Use SNMP and e-mail all severity one alerts.

D. Add an SNMP server using Cisco Integrated Management Controller.

Correct Answer: D

QUESTION 6

You have a single storage pool that has been dedicated for quality assurance and development purposes. Both groups have submitted requests for LUNs, but the total LUN capacity requested exceeds the total available capacity of the pool by several terabytes.

What would you do to satisfy both groups\\' requests?

A. Compress the LUNs.

B. Split the total pool capacity equally between both groups.

C. Use thin provisioned LUNs to oversubscribe capacity.

D. Provide network file space to offset the difference.

Correct Answer: C

QUESTION 7

What is the UCSM concept that confirms associated blade server hardware has the required configuration?

A. Templates

B. Service profiles

C. Resource pools

D. Server pools

Correct Answer: B

QUESTION 8

You receive a high priority new VM request that requires the creation of redundant VMs with host redundancy.

Which vCenter task must be performed to satisfy this requirement?

A. Configure host and VM monitoring.

B. Configure a VM-Hosts affinity rule in vSphere DRS.

C. Configure a custom VM monitoring rule in vSphere HA.

D. Configure a VM-VM affinity rule in vSphere DRS.

Correct Answer: D

QUESTION 9

Your company wants to know if you are currently having problems with your MDS switches. You want to review for potential problems using VCE VisionTM Intelligent Operations.

Which group would contain this component?

A. Compute

B. Storage

C. Network

D. Management

Correct Answer: C

QUESTION 10

You are asked to configure vMotion on a Vblock® System 340. According to VCE best practice, what is required to enable this feature?

A. Use separate subnets for vMotion source and destination hosts.

![Pass2Lead logo](https://Pass2Lead.com)
B. Enable jumbo frames for the vMotion network.

C. Select a dedicated VLAN for the vMotion traffic.

D. Use the same subnet as AMP management traffic.

Correct Answer: C

QUESTION 11

You are asked to add a new ESXi host to an existing VMware cluster. You identify an available blade with the same specifications.

Which statement is a VCE recommendation?

A. Hosts in a VMware cluster should each belong to a different VSAN.

B. Service profiles in a VMware cluster should be kept on as few chassis as possible.

C. Service profiles in a VMware cluster should be spread out over as many Vblock® Systems as possible.

D. Hosts in a VMware cluster should always belong to the same service profile template.

Correct Answer: D

QUESTION 12

You are using expandable resource pools in your VMware cluster to ensure each environment is allocated the appropriate resources. There is a resource pool for your development environment that has a reservation of 5 GHz CPU and 12 GB of memory. There is a child resource pool of the development resource pool named Sandbox that has a reservation of 1 GHz CPU and 4 GB of memory. You create four new virtual machines with 4 GB of memory in the Sandbox environment.

In this scenario, which statement is true?

A. Only one of the new virtual machines will power on.

B. All new virtual machines will power on.

C. Only three of the new virtual machines will power on.

D. No new virtual machines will power on.

Correct Answer: B

QUESTION 13

While managing a Vblock® System 340 you monitor the system for optimal performance configuration. Which VNX storage performance characteristic should be viewed to confirm expected storage behavior?

A. Verify that mission critical data is accessed from EFD.

![Pass2Lead](https://Pass2Lead.com)
B. Verify that the workload is balanced across the storage processors.

C. Verify that the storage processors are configured with the same amount of cache.

D. Verify that small and large I/Os are targeted to different storage processors.

Correct Answer: B

QUESTION 14

You are configuring storage groups for new ESXi hosts residing on a Vblock® System 200. A customer has asked for storage separation across virtual machines.

Where should the VMFS configured LUNs reside?

A. In the same storage group where the boot from the SAN LUN resides

B. In a single storage group with all the other ESXi hosts

C. In multiple storage groups configured for each host

D. In a single storage group configured for the control station

Correct Answer: C

QUESTION 15

You are deploying a new customer application on virtual machines. The application team has decided to implement an external load balancer for this application but wants to ensure that all the virtual machines are running on different ESXi hosts.

Which action should you perform to meet the application team\\'s requirement?

A. Apply a DRS VM-VM affinity rule on your VMware cluster for the application virtual machines.

B. Apply an HA VM-Host affinity rule on your VMware cluster for the application virtual machines.

C. Create a vAPP and create a vAPP affinity rule on your VMware cluster for the application virtual machines.

D. Configure the application virtual machines to use VMware Fault Tolerance affinity rules.

Correct Answer: A
