**QUESTION 1**

An administrator notices that 8 out of 10 virtual machines have memory ballooning and swapping. However, virtual machine 9 is not ballooning or swapping and virtual machine 10 is not ballooning but is swapping. Which two statements explain the behavior of virtual machine 9 and virtual machine 10? (Choose two.)

- A. Virtual machine 9 has a 100% memory reservation.
- B. Virtual machine 10 has a memory limit configured.
- C. Virtual machine 9 has memory shares set to HIGH.
- D. Virtual machine 10 does not have VMware Tools enabled or installed.

Correct Answer: AD

It seems that VM 9 has 100% memory reservation and VM 10 has a memory limit configured.

QUESTION 2

An administrator has configured three vCenter Servers and vRealize Orchestrator within a Platform Services Controller domain, and needs to grant a user privileges that span all environments. Which statement best describes how the administrator would accomplish this?

- A. Assign a Global Permission to the user.
- B. Assign a vCenter Permission to the user.
- C. Assign vsphere.local membership to the user.
- D. Assign an ESXi Permission to the user.

Correct Answer: A

Global permissions are applied to a global root object that spans solutions, for example, both vCenter Server and vCenter Orchestrator. Use global permissions to give a user or group privileges for all objects in all object hierarchies.

QUESTION 3

An administrator is unable to patch an ESXi 6.x host using VMware Update Manager. What is an alternative option for patching a host?

- A. Upload the offline bundle to a datastore and execute the command `esxcli software vib install -d` to apply it manually.
- B. Upload the vib to a datastore and execute the command `esxcli software vib install -d` to apply it manually.
- C. Upload the offline bundle to a datastore and execute the command `esxupdate install -v` to apply it manually.

D. Upload the vib to a datastore and execute the command `esxupdate install -v` to apply it manually.

Correct Answer: A

To patch a host, upload the offline bundle to a datastore and use `esxcli software vib install -d` to apply it manually.

QUESTION 4

An administrator notices that the time on an ESXi 6.x host is incorrect.

Which two actions should the administrator take to correct this issue? (Choose two.)

- A. Modify the time for the host using the vSphere client.
- B. Correct the NTP settings in the `/etc/ntp.conf` file.
- C. Configure NTP from the Direct Console User Interface.
- D. Use the `vicfg-ntp` command from the vSphere Management Appliance.

Correct Answer: AB

QUESTION 5

An administrator needs two vCenter Servers to be visible within a single vSphere Web Client session.

Which two vCenter Server and Platform Services Controller (PSC) configurations would accomplish this? (Choose two.)

- A. Install a single PSC with two vCenter Servers registered to it.
- B. Install two PSCs in the same Single Sign-On domain with one vCenter Server registered to each PSC.
- C. Install a single PSC with two vCenter Servers registered to it and configure Linked Mode.
- D. Install two PSCs in the same Single Sign-On domain with one vCenter Server registered to each PSC and configure Linked Mode.

Correct Answer: AB

To have two vcenter servers visible within a single vSphere web client session, you have to install a single PSC with both vCenter servers registered. You also need to install two PSCs in the same SSO domain with one vCenter Server registered to each PSC.

QUESTION 6

Refer to the Exhibit.

The number of vSphere HA heartbeat datastores for this host is 1, which is less than required: 2

An administrator receives the error message shown in the Exhibit. Which two actions can be taken to clear the warning? (Choose two.)

- A. Add a Virtual SAN datastore and configure it for High Availability heartbeating.
- B. Set the advanced High Availability parameter Das.heartbeatdsperhost to 1.
- C. Set the advanced High Availability parameter Das.ignoreInsufficientHbDatastore to true.
- D. Add a shared datastore and reconfigure High Availability.

Correct Answer: CD

Reference: http://kb.vmware.com/selfservice/microsites/search.do?language=en_US&cmd=displayKCa&externalId=2004739

QUESTION 7

An administrator decides to change the root password for an ESXi 6.x host to comply with the company's security policies.

What are two ways that this can be accomplished? (Choose two.)

- A. Use the Direct Console User Interface to change the password.
- B. Use the passwd command in the ESXi Shell.
- C. Use the password command in the ESXi Shell.
- D. Use the vSphere client to update local users.

Correct Answer: AB

To prevent unauthorized access to the vCenter Server Appliance Direct Console User Interface, you can change the password of the root user. The default root password for the vCenter Server Appliance is the password you enter during deployment of the virtual appliance.

QUESTION 8

What three supported methods can be used to upgrade a host from ESXi 5.x to ESXi 6.x? (Choose three.)

- A. vSphere Update Manager
- B. vihostupdate
- C. esxcli
- D. vSphere Auto Deploy
- E. esxupdate

Correct Answer: ACD

Reference: <https://pubs.vmware.com/vsphere-60/index.jsp?topic=%2Fcom.vmware.vsphere.upgrade.doc%2FGUID-FE668788-1F32-4CB2-845C-5547DD59EB48.html>

QUESTION 9

An administrator is assigning a user the Content Library administrator role. The user will only be creating the library for a single vCenter Server. What is the lowest level of the permission hierarchy that this role can be granted to the user and still allow them to create a Content Library?

- A. Global
- B. Datacenter Folder
- C. Virtual Center
- D. Datacenter

Correct Answer: A

To let a user manage a content library and its items, an Administrator can assign the Content Library Administrator role to that user as a global permission. The Content Library Administrator role is a sample role in the vSphere Web Client. Users who are Administrators can also manage libraries and their contents. If a user is an Administrator at a vCenter Server level, they have sufficient privileges to manage the libraries that belong to this vCenter Server instance, but cannot see the libraries unless they have a Read-Only role as a global permission.

Reference: http://pubs.vmware.com/vsphere-60/index.jsp?topic=%2Fcom.vmware.vsphere.vm_admin.doc%2FGUID-18F4B892-D685-4473-AC25-3195D68DFD90.html

QUESTION 10

An administrator observes the following symptoms for a virtual machine:

CPU usage is consistently above 90%

CPU ready value is consistently above 20%.

Application performance is impacted.

Which two actions should the administrator take to improve the performance of this virtual machine? (Choose two.)

- A. Increase the number of vCPUs assigned to this virtual machine.

- B. Decrease the number of vCPUs assigned to this virtual machine.
- C. Verify that VMware Tools is installed on every virtual machine on the host.
- D. Increase the CPU shares assigned to the virtual machine.

Correct Answer: CD

First, verify that the VMware tools are installed on every virtual machine on the host. Secondly, increase CPU shares to share the resource evenly among the processes.

QUESTION 11

Which Advanced Setting should be created for the vCenter Server to change the expiration policy of the vpxuser password?

- A. VimPasswordExpirationInDays
- B. VimExpirationPasswordDays
- C. VimPassExpirationInDays
- D. VimPasswordRefreshDays

Correct Answer: A

vCenter Server creates the vpxuser account on each ESX/ESXi host that it manages. The password for each vpxuser account is auto-generated when an ESX/ESXi host is added. The password is updated by default every 30 days.

To modify default password settings:

Connect vSphere Client to vCenter Server.

Click Administration > vCenter Server Settings > Advanced Settings. Scroll to the parameter VirtualCenter.VimPasswordExpirationInDays and change the value from the default.

Reference: http://kb.vmware.com/selfservice/microsites/search.do?language=en_US&cmd=displayKCA&externalId=1016736

QUESTION 12

Which three troubleshooting actions should an administrator take to address slow performance when deploying a virtual machine template? (Choose three.)

- A. Increase network throughput by adding additional uplinks to the vSwitch.
- B. Change the destination datastore or volume for the virtual machine template.
- C. Configure a Provisioning Traffic vmkernel port to perform the deployment operation.
- D. Reduce the size of the virtual machine template's virtual disk.
- E. Deploy the virtual machine template to the cluster and allow Distributed Resource Scheduler to register the virtual

machine.

Correct Answer: ABC

Slow performance while deploying a virtual machine template can be annoying. To address this problem, you can increase network throughput by adding uplinks to the vSwitch. You can also change the destination datastore for the virtual machine template. Similarly, you can configure provisioning traffic vmkernel port to do the deployment operation.
