Employees receive an email from an executive within the organization that summarizes a recent security breach and requests that employees verify their credentials through a provided link. Several employees report the email as suspicious, and a security analyst is investigating the reports. Which two steps should the analyst take to begin this investigation? (Choose two.)

A. Evaluate the intrusion detection system alerts to determine the threat source and attack surface.

B. Communicate with employees to determine who opened the link and isolate the affected assets.

C. Examine the firewall and HIPS configuration to identify the exploited vulnerabilities and apply recommended mitigation.

D. Review the mail server and proxy logs to identify the impact of a potential breach.

E. Check the email header to identify the sender and analyze the link in an isolated environment.

Correct Answer: CE

QUESTION 2

Refer to the exhibit. For IP 192.168.1.209, what are the risk level, activity, and next step?

CIDENT	USER IDENTITY	DURATION	LAST SEEN	٠	
malvare malcious host in #CSAL01	å 192.168.1.209	3 days long 12 days ago	Nov 16, 2019 10:08:58 GMT-05:00	NEW

- A. high risk level, anomalous periodic communication, quarantine with antivirus
- B. critical risk level, malicious server IP, run in a sandboxed environment
- C. critical risk level, data exfiltration, isolate the device
- D. high risk level, malicious host, investigate further

Correct Answer: A

An engineer detects an intrusion event inside an organization\\'s network and becomes aware that files that contain personal data have been accessed. Which action must be taken to contain this attack?

- A. Disconnect the affected server from the network.
- B. Analyze the source.
- C. Access the affected server to confirm compromised files are encrypted.

D. Determine the attack surface.

Correct Answer: C

QUESTION 4

Refer to the exhibit. What is the connection status of the ICMP event?

Distribution Port/ICMP × Code	Message 🗙	Classification ×	Application Protocol ×	Client x	Application Risk ×	Business Relevance	Access Control Rule X
80 (http) / tcp	STREAMS_DATA_ON_SYN (129:2:2)	Generic Protocol Command Decode	DICMP	ICMP client	Medium	Medium	rule
80 (http) / tcp	STREAMS_DATA_ON_SYN (129:2:2)	Generic Protocol Command Decode	DNS	DNS client	Very Low	Very High	Default Action
0 (No Code) / icmp	PROTOCOL-ICMP Echo Reply (1:408:8)	Misc Activity	DNS	DNS client	Very Low	Very High	Allow
54107 / udp	PROTOCOL-DNS TMG Firewall Client long host entry exploit attempt (3:19187:7)	Attempted User Privilege Gain	DNS	DNS client	Very Low	Very High	
49367 / udp	PROTOCOL-DNS dns response for rtc 1918 192.168/16 address detected(1:15935:7)	Potential Corporate Policy Violation	DNS	DNS client	Very Low	Very High	
57477 / udp	PROTOCOL-DNS dns response for rtc 1918 192,168/16 address detected (1:15935:7)	Potential Corporate Policy Violation	DNS	DNS client	Very Low	Very High

52652 / udp	PROTOCOL-DNS dns response for rtc 1918 192.168/16 address detected (1:15935:7)	Potential Corporate Policy Violation	DNS	DNS client	Very Low	Very High	
55528 / udp	PROTOCOL-DNS dns response for rtc 1918 192.168/16 address detected(1:15935:7)	Potential Corporate Policy Violation	DNS	DNS client	Very Low	Very High	
	PROTOCOL-DNS dns response for rtc 1918 192.168/16 address detected (1.15935:7)	Potential Corporate Policy Violation	DNS	DNS client	Very Low	Very High	
55640 / udp	PROTOCOL-DNS dns response for rtc 1918 192.168/16 address detected(1:15935:7)	Potential Corporate Policy Violation	DNS	DNS client	Very	Very High	
55991 / udp	PROTOCOL-DNS dns response for rtc 1918 192 168/16 address detected (1.15935.7)	Potential Corporate Policy Violation	DNS	DNS	Very	Very High	

- A. blocked by a configured access policy rule
- B. allowed by a configured access policy rule
- C. blocked by an intrusion policy rule
- D. allowed in the default action

Correct Answer: B

QUESTION 5

An engineer received multiple reports from users trying to access a company website and instead of landing on the website, they are redirected to a malicious website that asks them to fill in sensitive personal data. Which type of attack is occurring?

- A. Address Resolution Protocol poisoning
- B. session hijacking attack
- C. teardrop attack
- D. Domain Name System poisoning
- Correct Answer: D

QUESTION 6

A SOC team is investigating a recent, targeted social engineering attack on multiple employees. Cross-correlated log analysis revealed that two hours before the attack, multiple assets received requests on TCP port 79. Which action should be taken by the SOC team to mitigate this attack?

- A. Disable BIND forwarding from the DNS server to avoid reconnaissance.
- B. Disable affected assets and isolate them for further investigation.
- C. Configure affected devices to disable NETRJS protocol.
- D. Configure affected devices to disable the Finger service.

Correct Answer: D

QUESTION 7

How does Wireshark decrypt TLS network traffic?

- A. with a key log file using per-session secrets
- B. using an RSA public key
- C. by observing DH key exchange
- D. by defining a user-specified decode-as
- Correct Answer: A

Reference: https://wiki.wireshark.org/TLS

QUESTION 8

Vulnerability #1	Vulnerability #2
A vulnerability in the Command Line Interpreter (CLI) of ACME	A vulnerability in the web-based management interface of the
Super Firewall (all models) could allow an attacker to execute	ACME Big Router models 1010 and 1020 could allow an attacker
a command which would overflow a buffer in memory. In	to bypass authorization checks and then access sensitive
order to carry out this attack, the attacker needs to fulfill all of	information on the device, modify the device's configuration,
the following conditions:	impact the availability of the system, create administrative level
	and regular level users on the device. In order to exploit this
 a) Be logged in to the device over telnet or SSH, or through the local console 	vulnerability, the attacker needs to:
b) Be logged in as a high-privileges administrative user	a) Be able to reach port 80/tcp on an affected device
	b) The web-based management interface needs to be enabled on the
In order to trigger the vulnerability, the attacker has to	device
execute a command on the device and supply a specially	
crafted argument to such command. Once the command is	The attacker would then need to send a specially formed HTTP
executed, an internal stack-based buffer overflow will be	request to the web-based management interface of an affected
triggered. This buffer overflow may lead to code execution	system. The attacker does not need to log-in to the device before
within the process space of the CLI parser, or may crash the device.	launching the attack.
	All software versions are affected
All software versions are affected	There are no fixes available now
Fixes are available now	Customers can disable the web-based management interface to
There are no workarounds or mitigations	prevent exploitation. Customers will still be able to manage,
	configure and monitor the device by using the Command Line
	Interface (CLI), but with reduced capabilities for monitoring.

Refer to the exhibit. How must these advisories be prioritized for handling?

- A. The highest priority for handling depends on the type of institution deploying the devices
- B. Vulnerability #2 is the highest priority for every type of institution
- C. Vulnerability #1 and vulnerability #2 have the same priority
- D. Vulnerability #1 is the highest priority for every type of institution

Correct Answer: D

QUESTION 9

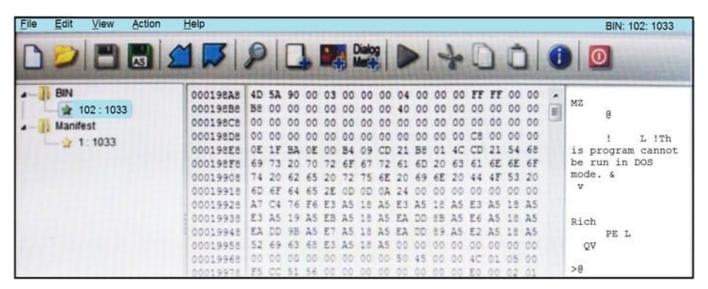

An engineer is analyzing a possible compromise that happened a week ago when the company? (Choose two.)

- A. firewall
- B. Wireshark
- C. autopsy
- D. SHA512
- E. IPS

Correct Answer: AB

QUESTION 10

Refer to the exhibit. An engineer is reverse engineering a suspicious file by examining its resources. What does this file indicate?

- A. a DOS MZ executable format
- B. a MS-DOS executable archive
- C. an archived malware
- D. a Windows executable file

Correct Answer: D

Reference: https://stackoverflow.com/questions/2577545/why-is-this-program-cannot-be-run-in-dos-mode-text-present-in-dll-

files#:~:text=The%20linker%20places%20a%20default,using%20the%20%2FSTUB%20linker%20option.andtext=This %20information%20enables%20Windows%20to,has%20an%20MS-DOS%20stub.

The network operations center has identified malware, created a ticket within their ticketing system, and assigned the case to the SOC with high-level information. A SOC analyst was able to stop the malware from spreading and identified the attacking host. What is the next step in the incident response workflow?

A. eradication and recovery

- B. post-incident activity
- C. containment
- D. detection and analysis

Correct Answer: A

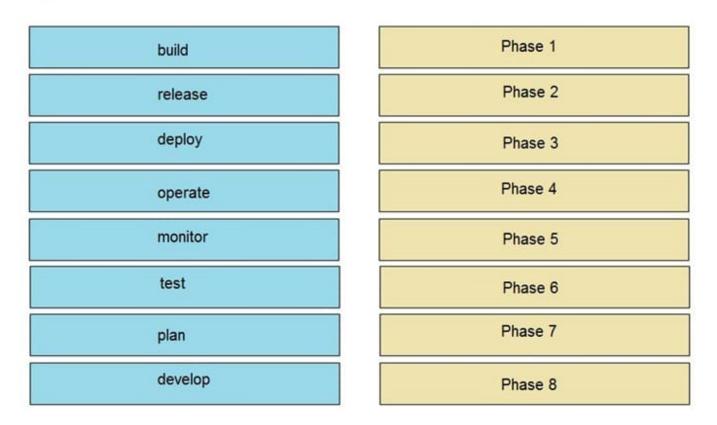

QUESTION 12

DRAG DROP

Drag and drop the components from the left onto the phases of the CI/CD pipeline on the right.

Select and Place:

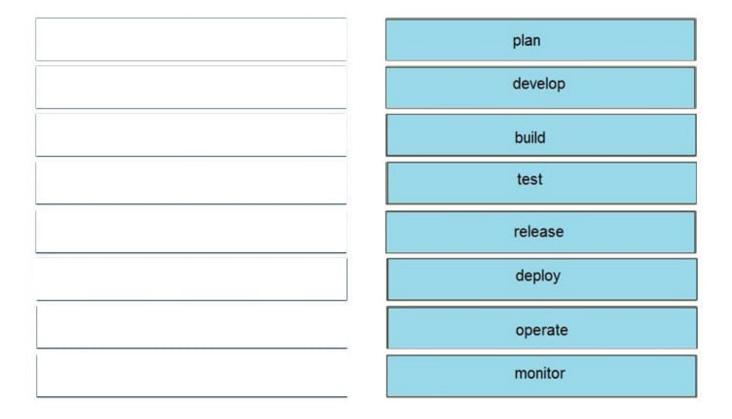

Answer Area

Correct Answer:

Answer Area

QUESTION 13

An engineer is investigating several cases of increased incoming spam emails and suspicious emails from the HR and service departments. While checking the event sources, the website monitoring tool showed several web scraping alerts overnight.

Which type of compromise is indicated?

- A. phishing
- B. dumpster diving
- C. social engineering
- D. privilege escalation
- Correct Answer: C

A SOC analyst detected a ransomware outbreak in the organization coming from a malicious email attachment. Affected parties are notified, and the incident response team is assigned to the case. According to the NIST incident response handbook, what is the next step in handling the incident?

A. Create a follow-up report based on the incident documentation.

- B. Perform a vulnerability assessment to find existing vulnerabilities.
- C. Eradicate malicious software from the infected machines.
- D. Collect evidence and maintain a chain-of-custody during further analysis.

Correct Answer: D

QUESTION 15

A threat actor used a phishing email to deliver a file with an embedded macro. The file was opened, and a remote code execution attack occurred in a company\\'s infrastructure. Which steps should an engineer take at the recovery stage?

- A. Determine the systems involved and deploy available patches
- B. Analyze event logs and restrict network access
- C. Review access lists and require users to increase password complexity
- D. Identify the attack vector and update the IDS signature list

Correct Answer: B
