QUESTION 1

Which statement describes using a Service Call control from the BPM UI toolkit to invoke a service flow?

- A. It is used to invoke a service without having to use boundary events and has an input and output variable with on load, on invoked, on result, on error events. It can be placed in client side human service coach page or inside coach view.
- B. A Service flow which has an input and output variable and a service task activity inside it calling an implementation service.
- C. It is used to invoke a service that returns the data displayed in the table, never bound to variable, with on load, on service data loaded, on service data error events. It can be placed in client side human service coach page or inside coach view.
- D. It is coupled with the human service in which it is used. It is created in the library area where User Interface library items are stored.

Correct Answer: B

- A. Terminates
- B. Restarts processes
- C. Sets user authentication
- D. Opens Instance Details U

Correct Answer: A

QUESTION 7

Why would a developer choose to include the optional parameter `\\snapshotId\\` when invoking certain REST API methods?

- A. A `\\snapshotId\\` logs the call to the REST log.
- B. A `\\snapshotId\\` ensures the object returned includes an identifying Id.
- C. A `\\snapshotId\\` ensures the right version of the process application is invoked.
- D. A `\\snapshotId\\` caches the call so it can return a response more quickly if invoked again.

Correct Answer: A

QUESTION 8

A developer has an Output Text with control ID `\\Output_Text1\\` above a Table in a Coach. Within the Table, there are two columns:

1.

The first column is a Text Control with control ID `TextV`

2.

The second column is a Button control with control ID `\\Button1\\`

How would a developer set the value of a Text control to `\\Clicked\\` when a Button on the same row is pressed?

- A. Set the Text's `\\On Change\\` Event configuration option to: `${Text1=}.setText(\\'clicked\\') ;`
- B. Set the Button's `\\On click\\` Event configuration options to: `${Text1=}.setText`
